| 3.1.2 Anmerkungen                                                                       | 74 |
| Anmerkung 1                                                                             | 74 |
| Anmerkung 2                                                                             | 74 |
| Anmerkung 3                                                                             | 75 |
| Anmerkung 4                                                                             | 75 |

## 1. User documentation

---

Welcome to the **Skiing App Professional** user documentation

[Download PDF](#)

## 2. English

---

### 2.1 Skiing App Professional

---

The **Skiing App Professional**, running on several Connect IQ™-compatible Garmin devices, shows you key parameters like speed, altitude, distance, etc. with high sensitivity GPS. As special feature an automatic phase detection is implemented in order to provide you separate values when going up by lift or when driving down the hill. Additionally an ANT+™ compatible sensors for heart rate and temperature monitoring are supported. It is designed as a watch app (and not a data field) for following reasons:

- Simple to install and use
- Arbitrary feature enhancement possible
- Circumvent that some watches (e.g. vivoactive™) can only display two Connect IQ™ data fields

[Link to Skiing App Professional on Garmin App Store](#)

This website provides further information regarding requirements, installation, getting started, supported data fields and features as well as frequently asked questions.

## 2.2 Disclaimer

---

### 2.2.1 Software disclaimer

---

Our offered applications, widgets and data fields (further on simply called software), which can be downloaded from the Garmin App Store, are provided 'as is' without warranty of any kind, either express or implied, including, but not limited to, the implied warranties of fitness for a purpose, or the warranty of non-infringement. Without limiting the foregoing, Robert Hofer (RH-SPORTS) makes no warranty that:

- the software will meet your requirements.
- the software will be uninterrupted, timely, secure or error-free.
- the results that may be obtained from the use of the software will be effective, accurate or reliable.
- the quality of the software will meet your expectations.

Software and documentation on our web site:

- could include technical or other mistakes, inaccuracies or errors.
- may be out of date where we make no commitment to update the it right away.
- we assume no responsibility for errors or omissions in the software or documentation available from our web sites.
- Robert Hofer (RH-SPORTS) has the right to change the software or documentation anytime.

In no event shall we be liable to you or any third parties for any special, punitive, incidental, indirect or consequential damages of any kind, or any damages whatsoever, including, without limitation, those resulting from loss of use, data or profits, whether or not we have been advised of the possibility of such damages, and on any theory of liability, arising out of or in connection with the use of this software.

The use of the software downloaded is done at your own discretion and risk and with agreement that you will be solely responsible for any damage to your computer system, watch of navigation device or loss of data that results from such activities. No advice or information, whether oral or written, obtained by you from us by mail or from our web sites shall create any warranty for the software.

### 2.2.2 User data protection according to DSGVO

---

RH-SPORTS clearly wants to state that we do not collect or save user information of any kind. If you are using our applications or data fields and save the recorded session afterwards then the data will be fully processed by Garmin Ltd. or its subsidiaries. This might include that the recorded data is sent to servers hosted or paid for by Garmin. Please read the user data protection rules from Garmin for further details.

Following applications offer map support:

- Cycling App Professional
- Hiking App Professional
- MTB App Professional
- SkiTour App Professional

These applications do not directly track personal information but makes use of a 3rd party API provided by dynamicWatch which does store personal information on every data request. You can read the detailed privacy policy of dynamicWatch [here](#).

### 2.2.3 Activity tracking and fitness metric accuracy

---

Our applications and data fields use the Garmin API's to retrieve most of the information and cannot be more precise than the data delivered from there. Garmin states following about activity tracking and accuracy:

- "Garmin devices are intended to be tools to provide you with information to encourage an active and healthy lifestyle. Garmin wearables rely on sensors that track your movement and other metrics. The data and information provided by these devices is intended to be a close estimation of your activity and metrics tracked, but may not be precisely accurate. Garmin wearables are not medical devices, and the data provided by them is not intended to be utilized for medical purposes and is not intended to diagnose, treat, cure, or prevent any disease. Garmin recommends you consult your doctor before engaging in any exercise routine."

## 2.2.4 Accuracy of wrist-based heart rate (Elevate)

---

Our applications and data fields use the Garmin API's to retrieve heart rate related data cannot be more precise than the data delivered from there. Regarding wrist-based accuracy, Garmin states following:

- "The optical wrist heart rate (HR) monitor for Garmin wearables is a valuable tool that can provide an accurate estimation of the user's heart rate at any given point in time. The optical HR monitor is designed to attempt to monitor a user's heart rate 24 hours a day, 7 days a week. The frequency at which heart rate is measured varies, and may depend on the level of activity of the user. When you start an activity with your Garmin optical HR device, the optical HR monitor measures more frequently. The intent is to provide the user with a more frequent and accurate heart rate reading during a given activity."
- "While our wrist HR monitor technology is state of the art, there are inherent limitations with the technology that may cause some of the heart rate readings to be inaccurate under certain circumstances. These circumstances include the user's physical characteristics, the fit of the device and the type and intensity of the activity as outlined above. The HR monitor data is not intended to be used for medical purposes, nor is it intended to diagnose, treat, cure or prevent any disease or condition."
- "Wrist heart rate accuracy during swimming is very limited. Garmin does not recommend using wrist heart rate during swimming activities and on some products, wrist heart rate monitoring is disabled while swimming. Garmin recommends using HRM-Swim™ or HRM-Tri™ heart rate monitors with compatible devices to track heart rate while swimming."

## 2.2.5 White background on AMOLED displays

---

For devices with AMOLED display (e.g. Venu™ based devices) we strongly recommend to always select the black background to avoid damages due to burn-in effects and to save battery life time!

**Note:**

We take over NO responsibility in case of damages due to burn-in effects.

## 2.3 Requirements

---

**Supported Garmin devices**

The **Skiing App Professional** runs on following Garmin devices:

- Approach® S50, S60 and S62
- Approach® S70 42mm
- Captain Marvel
- D2™ Air and Air X10
- D2™ Bravo
- D2™ Bravo Titanium
- D2™ Charlie
- D2™ Delta, Delta PX and Delta S
- D2™ Mach 1 and Mach 2
- Darth Vader™
- Descent™ G2
- Descent™ MK1, MK2 and MK2s
- Descent™ Mk3 51mm
- Enduro™ and 3
- Epix™ 2, Pro (Gen 2) 42mm and 47mm
- Fēnix® 3, HR and Chronos
- Fēnix® 5, 5S and 5X
- Fēnix® 5 Plus, 5S Plus and 5X Plus
- Fēnix® 6 and 6 Pro
- Fēnix® 6s and 6s Pro
- Fēnix® 6x Pro, 6x Sapphire, 6x Pro Solar and tactix® Delta Sapphire
- Fenix® 7, 7s and 7x
- Fenix® 7 Pro, 7s Pro and 7x Pro
- Fēnix® 7 Pro (no Wi-Fi) and 7x Pro (no Wi-Fi)
- Fenix® 8 43mm, 47mm and 51mm
- Fenix® 8 Solar 47mm and 51mm
- Fenix® 8 Pro 47mm
- Fenix® E
- First Avenger
- ForeAthlete® 230J, 235J, 630J, 735XTJ and 920XTJ
- Forerunner® 55, 165, 165 Music, 230, 235, 245, 245 Music, 255, 255 Music, 255s, 255s Music, 265 and 265s
- Forerunner® 570 42mm and 47mm, 630, 645, 645 Music, 735XT, 935, 945, 945 LTE, 955 and 955 Solar, 965 and 970
- Instinct® 3 AMOLED 45mm and 50mm
- Instinct® Crossover AMOLED
- MARQ™ Adventurer, Athlete, Aviator, Captain, Commander, Driver, Expedition and Golfer
- MARQ® (Gen 2) Athlete, Adventurer, Captain, Golfer and Aviator
- Rey™
- Venu™ and Mercedes-Benz® Collection
- Venu™ SQ and SQ Music
- Venu™ SQ 2 and SQ 2 Music
- Venu™ 2, 2 Plus and 2s
- Venu® 3 and 3s
- Venu® 4 41mm and 45mm

- Vivoactive™
- Vivoactive™ HR
- Vivoactive® 3, 3 Music, 3 Music LTE and 3 Mercedes-Benz® Collection
- Vivoactive® 4 and 4s
- Vivoactive® 5 and 6

**Garmin device Firmware requirements**

Please install the latest firmware on your Garmin device. Here the information about the minimum required Connect IQ™ version depending on your device type:

- V1.3.0
  - ForeAthlete® 230J, 235J, 630J and 920XTJ
  - Forerunner® 230, 235, 630 and 920XT
- V1.4.0
  - Vivoactive™
- V1.4.1
  - D2™ Bravo and Bravo Titanium
  - Fēnix® 3 and 3 HR
- V2.4.1
  - Approach® S60
  - ForeAthlete® 735J
  - Forerunner® 735XT
  - Vivoactive® HR
- V3.0.0
  - Approach® S62
  - D2® Charlie
  - D2® Delta, Delta PX and Delta S
  - Descent™ MK1
  - Vivoactive® 3 Mercedes-Benz® Collection
- V3.1.0
  - Descent™ MK2
  - Fēnix® Chronos
  - Fēnix® 5, 5S, 5X and 5 Quatix
  - Fēnix® 5 Quatix
  - Fēnix® 5 Plus, 5S Plus and 5X Plus
  - Forerunner® 935
  - Forerunner® 645 and 645 Music
  - Vivoactive® 3

## • V3.2.0

- Captain Marvel
- Darth Vader™
- D2™ Air
- Descent™ MK2s
- Enduro™
- Fēnix® 6/6 Pro
- Fēnix® 6s/6s Pro
- Fēnix® 6x Pro, 6x Sapphire, 6x Pro Solar and tactix® Delta Sapphire
- First Avenger
- Forerunner® 55, 245, 245 Music, 745 and 945
- MARQ™ Adventurer, Athlete, Aviator, Captain, Commander, Driver, Expedition and Golfer
- Rey™
- Venu™ SQ and SQ Music
- Venu™ and Mercedes-Benz® Collection
- Vivoactive® 3 Music and 3 Music LTE
- Vivoactive® 4s and 4

## • V3.3.0

- Forerunner® 945 LTE

## • V4.0.0

- D2™ Air X10
- D2™ Mach 1
- Venu™ 2, 2 Plus and 2s

## • V4.1.0

- Fenix® 7, 7s and 7x
- Forerunner® 255, 255 Music, 255s and 255s Music
- Forerunner® 955 and Solar
- Venu™ SQ 2 and SQ 2 Music

**Note:**

Please also take a look to the [Garmin feature set description for your device](#).

**Garmin software requirements**

- Please install the latest Garmin Connect App if you use the mobile phone for installation and configuration.
- Please install the latest Garmin Express Version if you use the PC/MAC for installation and configuration.

**2.3.1 Sensor requirements**

---

- Please enable GPS for speed, distance, location and altitude information.
- Please enable ANT+ sensors for heart rate and temperature information.

## 2.4 Getting started

---

This section describes everything you need to know to get **Skiing App Professional** up and running on your Garmin device.

Topics:

- [Install application](#)
- [Change user settings](#)
- [Start application](#)
- [User setting overview](#)

### 2.4.1 Install application

---

Please install the **Skiing App Professional** application by downloading it from the Garmin App Store via the Garmin Express Software on PC/MAC or via the Garmin ConnectIQ mobile app on your mobile phone.

[Link to Skiing App Professional on Garmin App Store](#)

Here a YouTube video describing the installation process in more detail:

[Click here to watch the video](#)

### 2.4.2 Change the user settings

---

The **Skiing App Professional** in the PREMIUM version offers a huge amount of [configuration options](#) which can be changed on your PC/MAC your or on your mobile phone:

- [Change User Settings on PC/MAC](#)
- [Change User Settings on Mobile Phone](#)

#### Change user settings on PC or MAC

All configurations can be changed on your PC or MAC by using the Garmin Express Software. Before changing configurations, please make sure that you have installed the latest software version. The software can be downloaded from the official Garmin web site.

**Note** The pictures in the following sections are taken from the Garmin Express Software V7.28.0 running on Windows 11 and may be subject of change in future Garmin versions.

**Step 1: Start Garmin Express Software** Look for the symbol as shown below and double-click it to start the Garmin Express software.

After that you should be able to see your Garmin device as shown in the picture below. If not, please add your device first. For details refer to the documentation provided by Garmin.

**Step 2: Establish Connection between PC/MAC and the Garmin Device** Connect your device via USB to your PC/MAC. Your device should be automatically detected and the Garmin Express software starts a synchronization process. When everything is ok, it is signaled via green lights as shown in the figure below. In case problems occur, please refer to the documentation provided by Garmin.

**Step 3: Select Device** Please click on the icon which shows your device. Following picture should appear:

**Step 4: Find Application or Data Field** Please click the marked button in the picture above. A list of all installed applications and data fields on your device should appear. Please scroll up/down until you find the application or data field you would like to configure as shown in the figure below:

**Step 5: Select Application or Data Field for Configuration** Please select the RH-SPORTS application or data field you would like to configure by clicking with the left mouse button to the three dots as marked in the left picture above for your application or data field of choice. A context menu will be shown where you have to select "Settings"

A similar screen like shown below should appear:

**Step 6: Change Configuration** Please note that configuration changes **ONLY** apply on your Garmin device if you have entered a proper PREMIUM activation key in the field marked in the picture below. For details about the possible key types, please refer to the [registration key details](#). If a proper activation key is entered, you can change **ALL** configurations according to your needs. Finally press the "Save" button at the bottom of the dialog. The Garmin Express Software will update the configurations on your device. In case of errors, please refer to the documentation provided by Garmin.

**Step 7: Disconnect Device** After the configuration changes were saved, disconnect your device from the PC/MAC.

**Step 8: Start Application or Data Field on Device** Please start our RH-SPORTS application or data field on your Garmin device. If you have the PREMIUM Version (key was correct), then all your configuration changes should have been applied. If not, please refer to our [Frequently Asked Questions](#).

#### Change user settings on mobile phone

All configurations can be changed on your mobile phone by using the Garmin ConnectIQ™ mobile app which is available for Android- and iOS-compatible devices. Before changing configurations, please make sure that you have installed the latest mobile app version. The app can be downloaded from the appropriate App Stores (e.g. Google Play, Apple Store, etc.)

**Note** The pictures in the following sections are taken from the Garmin ConnectIQ™ mobile app V2.43 running on an iPhone 14 Pro with iOS 26.2 and may be subject of change in future Garmin versions.

**Step 1: Start Garmin ConnectIQ™ mobile app** Look on your mobile phone for the app with the symbol shown below and click it to start the Garmin ConnectIQ™ mobile app.

A similar window as shown below should appear.

**Step 2: Press device button** The device button is located at the bottom on the right side. Please press it and following picture should appear if the device is not connected so far:

If the device is already connected with your mobile phone via Bluetooth, then the proper connection status is shown as illustrated in following picture:

**Step 3: Select your Garmin Devices** If you have multiple Garmin devices and the wrong device is selected by default, please select a proper device via the button on the top on the left side.

**Step 4: Select RH-SPORTS product** If you would like to change the settings for a RH-SPORTS application, please click the marked button **My device apps** as shown in the pictures below:

If you would like to change the settings for a RH-SPORTS data field, please click the marked button **My data fields** as shown in the pictures below:

**Step 5: Select an Application or Data Field for Configuration** A list of all applications and data fields appear. Please scroll up/down until you find the application or data field you would like to configure as shown in the figure below:

**Step 6: Select Settings** Please click on the **Settings** button as shown in the picture below:

**Step 7: Change Configuration** Please note that the configuration changes **ONLY APPLY** on your device if you have entered the proper PREMIUM activation key in the field marked in the picture below. For details about the possible key types, please refer to the [registration key details](#). If a proper activation key is entered, you can change **ALL** configurations according to your needs.

**Step 8: Save Configurations** Finally press the **Save** button at the top on the right side. The Garmin mobile app will update your configurations on your device. In case of communication errors, please refer to the documentation provided by Garmin.

**Step 9: Start Application or Data Field on Device** Please start our RH-SPORTS application or data field on your Garmin device. If you have the PREMIUM Version (key was correct), then all your configuration changes should have been applied. If not, please refer to our [Frequently Asked Questions](#).

### 2.4.3 Start application

This section describes how to start Skiing App Professional on your Garmin device.

#### Find application on Garmin device

After installation the downloaded **Skiing App Professional** application can be found on the Garmin Watch by pressing the "Start" Button. Search for following icon and select it to start the application:

#### Application start

The application start process runs through following phases:

##### Phase 1:

In this phase the About screen with version information is shown for ~2 seconds (FREE version) respectively ~1 second (PREMIUM version). This phase cannot be aborted. On a D2™ Bravo it looks like that:

##### Phase 2:

In this phase information about your registration status is shown for ~6 seconds (FREE version). In the PREMIUM Version this screen is omitted for faster startup. This phase cannot be aborted. On a D2™ Bravo it looks like that:

**Phase 3:**

In this phase the sensor polling screen is shown as long as no proper GPS signal has been found or the timeout is reached. If a proper GPS signal is already available, then the screen is only visible for a short moment (~1 second). If not, then this screen is shown for at most ~35 seconds. During this phase the "BACK" button can be used to abort the polling sequence. On a D2™ Bravo it looks like that:

**Note:**

Please make sure that your GPS or ANT+ sensors are configured and enabled on your device. Otherwise certain data fields do not show useful/ proper information.

**Phase 4:**

The application startup process is finished and the application can be used. On a D2™ Bravo it looks like that:

## 2.4.4 Change user settings

Most configuration changes only APPLY in the **PREMIUM Version** after storing the settings. Please donate first to get the registration key.

### Registration key for PREMIUM version

There are following ways to get a registration key in order to activate the PREMIUM version:

- **Method 1:** After successful donation, you receive a mail from RH-SPORTS with the PREMIUM registration key(s) as PDF.
  - If you donated for the **Complete application and data field package**, you get:
    - a master key in the format "RH-SPORTS-Nxxxx", which can be used in:
      - the [RH-SPORTS HUB](#) application to start from there all other standalone applications.
      - each individual standalone app and data field.
  - If you donated for an individual application or data field or a package includes more applications and/or data fields, you get a key in the format "XXXX XXXX" for each included product.
- **Method 2:** If you have received an RH-SPORTS gift card then you can use the code on the gift card as master key (in the format "RH-SPORTS-xxxxxxx") in:
  - the [RH-SPORTS HUB](#) application to start from there all other standalone applications.
  - each individual standalone app and data field.

Please copy the registration key exactly in the given format (e.g. XXXX XXXX) into this text field. The registration key evaluation is case sensitive.

Registration Key for PREMIUM Version where ALL configurations apply.

XXXX XXXX

Here some important registration hints:

**Hint 1:** Please copy the registration key exactly in the given format (e.g. XXXX XXXX) into this text field:

- The registration key for individual applications or data fields is a hexadecimal number (numbers from 0 to 9 and big letters from A to F).
- The master key has the format "RH-SPORTS-xxxxxxx" where x must be a capital letter or a number.

The evaluation of the code is case-sensitive!

**Hint 2:** Please synchronize the settings with your watch afterwards. If you use Garmin Express software on PC or MAC, please disable the bluetooth connection between your mobile phone and watch during configuration as otherwise the settings might be overwritten again.

**Hint 3:** Sometimes it is necessary to reboot the watch once (for whatever reason).

**Hint 4:** Please use the proper key for the selected standalone application or data field.

**Hint 5:** Please make sure that there are no floating point values in the app settings anymore (except for Swimming App where they are allowed).

### Activity type

This option allows you to select among different activity types. Depending on your selection the session data will be categorized. Please note that this configuration has to be done before manually starting a session the first time.

Following options are available:

- Generic profile (default setting)
- Alpine skiing
- Snow boarding

#### Note:

On several Garmin devices the **Alpine skiing** activity type is not properly implemented by Garmin. In case of elevation problems, please use the **Generic profile** as [described here](#)

#### Note:

This configuration feature is only available in the PREMIUM Version!

### Satellite configuration

This option allows you to select the satellite configuration. Following options are available on devices with CIQ 3.2 and higher:

- GPS legacy setting
- GPS only
- GPS + BEIDOU
- GPS + GALILEO
- GPS + GLONASS
- GPS + GLONASS + GALILEO + BEIDOU
- Multi-GNSS
- AutoGNSS (SatIQ)
- GPS off

#### Note:

Not all applications are offering all mentioned configuration options listed above.

#### Note:

If a certain configuration is not supported by GARMIN on your device then a less accurate setting will be selected automatically.

The sensor page shows you the information of the satellite configuration which is currently used. For further details about the satellite quality, please refer to [here](#).

Please be aware that disabling satellites (GPS off) may have following impacts:

- Satellite-dependent data fields will not show proper information anymore.
- Tracking of your location will be disabled.

**Note:**

On devices with CIQ 3.1 and lower always GPS (legacy setting) is used as Garmin does not allow to control this here. Rumors say that the latest configuration in your Garmin native app is used which means that you could also have e.g. GPS + GLONASS.

### **Averaging period for pace/cadence**

This option allows you to configure the averaging period in seconds for instant pace and cadence averaging. If you e.g. would like to have PACE averaged over the last 10 seconds, then please set the value to 10. The PACE xs data field shows this information. With longer averaging periods, the shown values are more stable but also lazier.

**Note:**

This configuration feature is only available in the PREMIUM version. In the FREE version the value is fixed to 10 seconds!

### **Background color**

This option allows you to select the background and text color.

Following options are available on devices with CIQ 1:

- White .. white background and black text color
- Black .. black background and white text color

Please refer to following picture for better illustration:

On devices with CIQ2 and higher, following extended options are available:

- White background with black text color and grey header/footer
- Black background with white text and grey header/footer
- White background with black text and inverted colors in header/footer
- Black background with white text and inverted colors in header/footer

Please refer to following picture for better illustration:

**Note:**

By default the option with "Black background with white header/footer" is used for best readability on all devices!

**Note:**

Devices with AMOLED display (e.g. Venu™ based devices) only support black background to avoid burn-in damages and to save battery life time!

**Auto scroll time**

This option allows you to enable and configure the auto scroll feature (automatically cycles through data pages during workout) by entering the auto scroll time. This is the time in seconds when the application automatically scrolls to the next page.

**Note:**

A value of 0 (default) or 1 deactivates this feature!

**Note:**

This configuration feature is available in the FREE version as well.

**Auto-pause session recording during UP phase**

This option allows you to configure the feature to automatically pause the session recording during UP phase. This is very useful if you do not want to include the data during up phases (= lift) in your activity recording. This has following advantages:

- only the RUN phases are recorded and after saving visible in Garmin Connect or Strava.
- the proper amount of runs is shown later in Garmin Connect or Strava

Otherwise the **Skiing App Professional** properly splits the data for RUN and UP phases but they are not shown in that way later in the Garmin Connect summary. Additionally each change from RUN to UP and vice versa triggers a new LAP which gives you double of the RUNS later in Garmin Connect or Strava.

**Note:**

This configuration feature is only available in the PREMIUM version!

**Altitude delta configurations for phase switches**

These two options allow you to configure after which altitude delta the Skiing App Professional switches between UP and RUN phase and vice versa. Both can be configured independently.

Please note that a too low value might result in wrong phase switches, a too high value in too late phase switches. As recommendation we propose following settings:

- 5 to 10 meters on watches with barometric altimeter (e.g. Fenix® 3, 5, 6, 7 or 8 series).
- 20 meters on watches without barometric altimeter (e.g. FR® 230 or 630, Vivoactive® series).

**Note:**

Please check the specification of your Garmin device to find out whether it has a barometric altimeter or not. By default the value is set to meters to avoid problems with watches without barometric altimeter. The smallest allowed value is 5!

**Note:**

This configuration feature is available in the FREE version as well!

### Speed limit for detecting idle phase

Speed limit (in km/h or mi/h) where below the collected data is counted as IDLE phase. As recommendation we propose a value of 2.0.

**Note:**

This configuration feature is available in the FREE version as well!

### ALERT features

The **ALERT1 mode** configuration option allows you to select the mode for the ALERT1 feature. Please note that this configuration has to be done before manually starting a session the first time. Following options are available:

- Feature disabled (no user-defined ALERT support).
- Single distance alert (an ALERT is shown once when the user-defined distance is reached).
- Periodic distance alert (an ALERT is shown every time when the user-defined distance elapsed).

**ALERT 1 Mode**

Periodic Distance Alert

Distance value in km/miles for ALERT 1

1.0

The **ALERT2 mode** configuration option allows you to select whether an alert should be shown on phase switch detection between UP and RUN. Following options are available:

- Feature disabled (no user-defined ALERT support).
- Enable alert on UP/RUN phase change.

**ALERT 2 Mode**

Disabled

Enable Alert on UP/RUN phase change

For further details about the ALERT features, please [click here](#).

**Note:**

This configuration feature is only available in the PREMIUM version!

### Show/hide data pages

This option allows you to select whether data pages shall be visible or not to have a better overview about your really needed information.

**Note:**

In the FREE version the generic page with advertisement cannot be disabled!

### 2-field data pages

This option allows you to freely select the content of all 2-field data pages out of a huge list of all available data fields (even during the ongoing training session). This enables you to adjust all fields completely according to your personal preferences.

For an overview of available data fields, please [click here!](#)

**Note:**

This configuration feature is only available in the PREMIUM version!

### 4-field data pages

This option allows you to freely select the content of all 4-field data pages out of a huge list of all available data fields (even during the ongoing training session). This enables you to adjust all fields completely according to your personal preferences.

For an overview of available data fields, please [click here!](#)

**Note:**

This configuration feature is only available in the PREMIUM version!

7-field data pages

This option allows you to freely select the content of the 7-field data page out of a huge list of all available data fields (even during the ongoing training session). This enables you to adjust all fields completely according to your personal preferences.

For an overview of available data fields, please [click here!](#)

**Note:**  
This configuration feature is only available in the PREMIUM version!

## 2.5 Data fields

---

This section gives you an overview about all data fields of the **Skiing App Professional** application.

### 2.5.1 Data field table

---

Below the table with all available data fields:

**Note:**  
Please note that some of them require the **PREMIUM Version** to be active so that they are visible!

| Data field header | Data field description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALT               | Current altitude in meters or feet depending on your watch unit settings for distance. Please <a href="#">click here</a> and find further information in note 1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CR AHR            | Average heart rate of current run in bpm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CR DOWN           | Current run down or descent (or down) in meter or feet based on your watch unit settings for altitude. Please <a href="#">click here</a> and find further information in note 1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CR DIST           | Current run distance in km or miles based on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CR MHR            | Maximum heart rate of current run in bpm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CR MSPD           | Maximum speed of current run in km/h or mi/h based on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| DIST              | Distance information in km or mi based on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| DOWN              | Negative altitude difference in meters or feet for the whole session depending on your watch unit settings for altitude. Please <a href="#">click here</a> and find further information in note 1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| ELAPS             | Elapsed total session time (including IDLE time) in the format hh:mm, h:mm:ss or mm:ss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| HR                | Current heart rate information in bpm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| HR ZONE           | <p>Current heart rate zone in the range of 0.0 to 6.0 with following meaning:</p> <ul style="list-style-type: none"> <li>* 0.0 ... current heart rate below Zone 1 (minimum heart rate)</li> <li>* 1.0 - 1.9 ... current heart rate in Zone 1</li> <li>* 2.0 - 2.9 ... current heart rate in Zone 2</li> <li>* 3.0 - 3.9 ... current heart rate in Zone 3</li> <li>* 4.0 - 4.9 ... current heart rate in Zone 4</li> <li>* 5.0 - 5.9 ... current heart rate in Zone 5</li> <li>* 6.0 ... current heart rate above Zone 5 (maximum heart rate).</li> </ul> <p>The value is derived from your running heart rate profile settings configured at Garmin. Please <a href="#">click here</a> and find further information in note 3.</p> |
| IDLE              | Idle session time where speed was below the following user-defined limit (default is 0.5 km/h or mi/h).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| KCAL              | Kilo-calories consumption for the whole session.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| MAX ALT           | Maximum altitude in meters or feet depending on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| MIN ALT           | Minimum altitude in meters or feet depending on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| M HR%             | Current heart rate in percentage of maximum heart taken from the user settings depending on the application you are using. Please refer to HR ZONE for further details. Please <a href="#">click here</a> and find further information in note 3.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| PHASE             | Shows current phase "UP" or "RUN".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| R MVSPD           | Maximum vertical speed of all runs in meters/h or feet/h based on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| R TIME            | Total run time in the format hh:mm, h:mm:ss or mm:ss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|          |                                                                                                                                                                                                                                       |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SPEED    | Current speed information in km/h or mi/h based on your watch unit settings for distance.                                                                                                                                             |
| TEMP     | Current temperature in celsius or fahrenheit depending on your watch unit settings for temperature. Please <a href="#">click here</a> and find further information in note 4.                                                         |
| TIME     | Current time in 12/24h format based on your watch system settings.                                                                                                                                                                    |
| TRAIN_E  | The Training Effect score of the current activity. Training Effect is a score developed by FirstBeat, which indicates an activity's level of effect on aerobic fitness. Scores range from 1.0 (easy) to 5.0 (overreaching).           |
| UP       | Positive altitude difference in meters or feet for the whole session depending on your watch unit settings for distance. Please <a href="#">click here</a> and find further information in note 1.                                    |
| UP DIST  | Total up distance (e.g. when being in lift) in km or mi based on your watch unit settings for distance.                                                                                                                               |
| UP TIME  | Total up time (e.g. when being in the lift) in the format hh:mm, h:mm:ss or mm:ss.                                                                                                                                                    |
| VSPD `5s | Current vertical speed in meters/h or feet/h of the last 5 seconds when session is running depending on your watch unit settings for elevation. A positive value means that you moved up, a negative value means that you moved down. |

## 2.5.2 Notes

### Note 1

This information is only precise enough on watches with barometric altimeter as altitude information cannot be derived precisely from GPS. For further details, please [click here](#).

### Note 2

Information is only precise if you have an ANT+ speed sensor and a barometric altimeter on your watch. Especially if relative altitude information is derived from GPS, then it will not be very precise due to the physical limitations of GPS as described here. For further details, please [click here](#).

### Note 3

The EPIX watch does not support the Garmin SDK >= 1.2.6. Thus it is not possible for an app to access the heart rate profiles. Therefore the heart rate zones are derived from the maximum heart rate configured by the user.

### Note 4

Temperature sensor support in Garmin apps is only possible if either an ANT+ TEMPE sensor is available or the device itself has an internal temperature sensor. The ANT+ TEMPE has higher priority as the internal sensor.

## 2.6 Features

This section describes the most important features of the **Skiing App Professional** in more detail. Here a short summary:

- [Session features](#)
- [Alert features](#)
- [Auto-detection of UP/RUN phases](#)
- [Auto-pause recording during UP phases](#)
- [Run history information](#)
- [Screen lock feature](#)
- [Workout summary](#)

### 2.6.1 Session features

This section describes the workout session features which are very similar among all of our Garmin Connect IQ™ applications. The current workout session status is indicated by a specific sign. Following table provides an overview about all possible states of a workout session.

| Session status | Visualization               | Description                                                                                                                                                                                                                |
|----------------|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOT STARTED    | Blinking red border         | Workout session (recording) was not started so far. This is the state after starting the app. Press the "START" button to start workout.                                                                                   |
| UP PHASE       | Blinking orange border      | Workout session (recording) is running and UP phase is active (e.g. when going upwards by lift)                                                                                                                            |
| RUN PHASE      | Constant grey header/footer | Workout session (recording) is running and RUN phase is active.                                                                                                                                                            |
| AUTO PAUSED    | Blinking red pause sign     | Workout session (recording) is automatically paused when the UP phase is active.                                                                                                                                           |
| IDLE           | Blinking yellow pause sign  | Workout session is in Idle Phase which means that the speed is below the user-defined limit. Activity recording is still enabled.                                                                                          |
| PAUSED         | Blinking red stop sign      | Workout session (recording) was manually paused via menu by selection of "Pause Session". No activity recording is done. It can be resumed at any point in time by entering the menu again and selecting "Resume Session". |

#### Start a workout session (NOT STARTED)

After starting the app the workout session status is "NOT STARTED" as the session has to be manually started by the user. This can be done by pressing the "START" button. This state is visualized by showing a blinking red boarder every two seconds as illustrates in following picture:

### Workout session running (RUNNING)

After pressing the "START" button the first time after app start, the session status changes from "NOT STARTED" to "UP".

#### UP PHASE

When going upwards e.g. via lift the app is in UP phase. This state is visualized by showing a blinking orange boarder every two seconds as illustrates in following picture:

#### RUN PHASE

When driving downwards the app is in RUN phase. This state is visualized by a constant grey header/footer as illustrates in following picture:

#### AUTO PAUSED

When the user enabled the [auto-pause session recording](#), the session recording is automatically stopped during the UP phases and resumed when the RUN phases start. This state is visualized as illustrates in following picture:

#### IDLE PHASE

Whenever the speed goes below a user-defined limit (as configured in app settings) the app automatically enters the "IDLE" phase. This is visualized by showing a yellow pause sign in the middle of the screen and a yellow surrounding on the borders every two seconds. Following picture illustrates that mode:

When the speed goes above the app-specific speed limit, the app enters "RUNNING" mode again.

### Manually paused session (PAUSED)

The user can manually pause the workout session at any time if the status is "UP", "RUN" or "IDLE". This can be done by pressing the "START" button. After that a menu is shown where the user can select among following choices by either pressing the touch screen or by up/down or left/right buttons:

| User selection   | Description                                                                                                                                                                                                     |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pause            | Workout session is paused. This allows the user to navigate through the data pages. The workout session can be resumed again at any time by pressing "START" button and select "Resume".                        |
| Resume           | Start or resume workout session                                                                                                                                                                                 |
| Save and exit    | Save workout data and close the application. After synchronization with your watch or via Garmin Express Software the workout data will be uploaded to the Garmin cloud and will be visible via Garmin Connect. |
| Discard and exit | Discard session data and close the application. Please note that ALL the recorded workout data is lost!                                                                                                         |

A paused session is visualized by showing a red stop sign in the middle of the screen and a red surrounding on the borders every two seconds as illustrated in following picture:

2.6.2 ALERT features

Already the FREE Version of **Skiing App Professional** provides you basic ALERT features, e.g. to indicate the start and stop of the session recording. Following figure illustrates how it looks on a Forerunner® 235:

In the PREMIUM version of the **Skiing App Professional** following additional ALERT features are provided:

- Distance alert
- Heart rate alert

Distance alert feature

In order to use this feature, please configure the proper "ALERT1 mode" and "ALERT2 mode" according to following tables:

| ALERT1 mode             | Description                                                                                                |
|-------------------------|------------------------------------------------------------------------------------------------------------|
| Disabled                | Feature is disabled.                                                                                       |
| Single distance alert   | In this mode a distance ALERT is shown once when the user-defined distance (in km or miles) is reached.    |
| Periodic distance alert | In this mode a distance ALERT is shown every time when the user-defined distance (in km or miles) elapsed. |

Following figure illustrates how it looks on a Forerunner® 235:

Heart rate alert feature

| ALERT2 mode            | Description                                                                                                                                                                                                                                  |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Disabled               | ALERT2 feature is disabled.                                                                                                                                                                                                                  |
| Heart rate above limit | In this mode a heart rate ALERT is shown when the user-defined limit (in beats per minute) is exceeded. If such an alert is shown then you have ~30 seconds time for reduce the heart rate below the limit, else a new alert is shown again. |

Following figure illustrates how it looks on a Forerunner® 235:

## 2.6.3 Phase switch alert feature

In order to use this feature, please configure the proper "ALERT2 mode" according to following tables:

| ALERT2 mode | Description                                                                      |
|-------------|----------------------------------------------------------------------------------|
| Disabled    | Feature is disabled (no user-defined ALERT support).                             |
| Enabled     | Feature is enabled and triggers an alert upon phase change (UP/RUN phase change) |

Following figure illustrates how it looks on a Forerunner® 235:

## 2.6.4 Auto-detection of UP/RUN phases

The **Skiing App Professional** automatically switches between UP and RUN phase if the [user-defined altitude delta](#) is exceeded.

The tracking statistics of the Skiing App Professional can be divided into following three main sections and some common data which is useful for all sections:

- UP data fields (e.g. lift-up time for downhill activity type)
- RUN data fields
- Other data fields

The Skiing App Professional offers a huge amount of data fields which can be freely assigned to any place in the data pages in the **PREMIUM version**.

**Note:**

Please note that in the FREE Version not all data fields are available.

**COMMON data fields**

- Current altitude (ALT)
- Current heart rate (HR)
- Current heart rate zone (HR ZONE)
- Current heart rate in percentage of the maximum heart rate (M HR%)
- Current speed (SPEED)
- Current temperature (TEMP)
- Current time (TIME)
- Current vertical speed (VSPD 10s)
- Maximum altitude (MAX ALT)
- Minimum altitude (MIN ALT)
- Total burned calories (KCAL)
- Total distance (DIST)
- Total elapsed time (ELAPS)
- Total vertical ascent (UP)
- Total vertical decent (DOWN)

**UP data fields**

- Total up distance (UP DIST)
- Total up time (UP TIME)

**RUN data fields**

- Amount of runs (RUNS)
- Average heart rate (R AHR)
- Average speed (R ASPD)
- Average vertical speed (R AVSPD)
- Current run average heart rate (CR AHR)
- Current run down or descent (CR DOWN)
- Current run distance (CR DIST)
- Current run maximum heart rate (CR MHR)
- Current run time (CR TIME)
- Current run maximum speed (CR MSPD)
- Maximum heart rate (R MHR)
- Maximum speed (R MSPD)
- Maximum vertical speed (R MVSPD)
- Total run distance (R DIST)
- Total run time (R TIME)

**Other data fields**

- Current UP/RUN phase (PHASE)
- Total idle time (IDLE)

## 2.6.5 Auto-pause recording during UP phases

The **Skiing App Professional** supports the innovative feature to disable [session recording during UP phases](#).

**Note:**

No data is recorded during app phases!

**Note:**

The data fields for UP phase and the IDLE data field has to be ignored in that mode as they make no sense!

## 2.6.6 Run history information

In the PREMIUM version of the **Skiing App Professional** the history of the last 4 runs can be made visible in separate data pages. On all Garmin devices at least 2 different pages are available. On newer Garmin devices with CIQ 2 and higher 3 different pages are available.

The run history page 1 shows following information: - RUN (run number) - TIME (run time) - DIST (run distance in km or mi)

The run history page 2 shows following information: - RUN (run number) - DOWN (run elevation in meters or feet) - M SPEED (run maximum speed in km/h or mi/h)

The run history page 3 shows following information: - RUN (run number) - A GRADE (run average grade) - M GRADE (run maximum grade)

Following picture illustrates this information:

## 2.6.7 Screen lock feature

When the session is started, the screen lock feature can be activated by following sequence:

- Press "START" button.
- Scroll down until "Lock Screen" appears in the menu.
- Select "Lock Screen".

When the screen lock feature is active, only the "START" button will be handled anymore, all other buttons or touch screen inputs are ignored.

To disable the screen lock again, please perform following steps:

- Press "START" button.
- Scroll down until "Unlock Screen" appears in the menu.
- Select "Unlock Screen".

## 2.6.8 Workout summary

---

After saving the workout session a workout summary is shown on devices with CIQ2 and later with following information:

- Duration in the format m:ss, mm:ss, h:mm:ss or hh:mm:ss.
- Number of runs.
- Run time in the format m:ss, mm:ss, h:mm:ss or hh:mm:ss.
- Run distance in km or mi.
- Maximum run speed in km/h or mi/h.
- Average heart rate in bpm.
- Elevation gain in meter or feet.
- Elevation loss in meter or feet.
- Calories consumption in kcal.
- Training effect.

## 2.7 Sensors

This section gives an overview about the supported [GPS](#) and [ANT+](#) sensors in the **Skiing App Professional**.

### Satellite quality

The number of green bars indicates the satellite signal quality.

Following table describes the meaning in more detail:

| Number of green bars | Meaning                                                                                                       |
|----------------------|---------------------------------------------------------------------------------------------------------------|
| 0                    | No satellites available                                                                                       |
| 1                    | Satellite quality is based on the last known fix                                                              |
| 2                    | Satellite quality is poor (Only a 2-D fix is available, likely due to a limited number of tracked satellites) |
| 3                    | Satellite quality is usable (A 3-D fix is available, with marginal HDOP (horizontal dilution of precision))   |
| 4                    | Satellite quality is good (A 3-D fix is available, with good-to-excellent HDOP)                               |

### 2.7.1 ANT+ sensors

The **Skiing App Professional** supports following ANT+ sensors:

- ANT+ heart rate sensor
- ANT+ temperature sensor

**Note:**

Please pair the ANT+ sensor(s) before starting the application in your watch settings!

**Note:**

Some sensors support ANT+ and BLE. Please make sure you paired the sensors for ANT+!

## 2.8 Frequently asked questions

---

### 2.8.1 Elevation problems in Garmin Connect

---

When selecting the activity profile [Alpine Skiing](#) the elevation shown in the Garmin Connect summary is wrong due to a bug in the Garmin software/firmware as shown in the figures below:

The shown values in the app are fine as well as the values stored under connect IQ as shown in the figure below:

We already reported the problem in the Garmin forum on 24.02.2019. [Press here](#) to see the progress on Garmin side.

Until it is fixed, please use the [Generic Profile as activity type](#) as work-around.

### 2.8.2 What to do if the app or data field does not work?

---

We do our best to test the applications and data fields as good as possible. As we do not have all physical available Garmin devices and all ANT+ sensors with all combinations of Garmin firmware versions, we have to do most of the tests on the simulator provided by Garmin. If you detect problems with our application or data field on your Garmin device, please provide us detailed feedback via the official bug report form in order we are able to understand and reproduce your problem. This gives us a fair chance to provide a fix as soon as possible.

[Please press here to get the bug report dialog](#)

THANK YOU VERY MUCH for YOUR SUPPORT!!

### 2.8.3 Why is an update of the firmware required?

---

Some users reported that an update of the firmware is requested even though the latest firmware is already installed. In such a case, please try out following options:

- Update your Garmin Express or Garmin Mobile software (if you don't have the latest versions installed).
- Reboot your device once.

### 2.8.4 What is the purpose of the FREE version?

---

The **FREE Version** is fully functional and offers you a basic feature set which allows you to test the application or data field intensively without any risk on your Garmin device.

**Note:**

In our standalone applications some more advanced features (e.g. alerts) cannot be activated in the FREE version and a periodic **FREE Version** notification is shown.

**Note:**

In our data fields all features are available even in the FREE version but still a periodic **FREE Version** notification is shown.

If you like our application or data field we would be very happy if you donate to upgrade to the [PREMIUM Version](#).

### 2.8.5 How to upgrade to the PREMIUM version?

---

If you like our application or data field and would you like to benefit of following further advantages:

- support our further development or
- unlock all (more advanced) features or
- get ride of the periodic **FREE Version** notification

we would be very happy if you donate to upgrade to the **PREMIUM Version**.

**Note:**

The PREMIUM version is a **lifetime license** which is valid for ALL future updates and can be used on as many devices you personally own, even at the same time!

Here two links for further details how to donate for the **PREMIUM Version**:

- [RH-SPORTS website](#)
- [Online shop](#) with additional payment options like:
  - stripe credit card
  - PayPal (including credit card, debit card and bank transfer)
  - Payment in advance (useful for countries where stripe or PayPal do not work)

## 2.8.6 I did not received the unlock keys for the PREMIUM Version after donation?

After successful donation you immediately will get a mail to the mail address used in PAYPAL. It contains the unlock keys and the activation information for the selected **PREMIUM version(s)**. The information is provided as attached PDF. If this is not the case, please do following:

- Check whether you used the right mail address. It is the one you are using in PAYPAL.
- Check whether the mail went to your JUNK or SPAM folder.
- Write a mail to [rh-sports@gmx.at](mailto:rh-sports@gmx.at) to request the keys.

## 2.8.7 What to do if after entering the key, still the FREE version is active?

You can detect whether the **FREE version** is still active or not in following way:

- In standalone applications (e.g. Running App Professional) the **FREE version** is active, if you see a "Please donate as EARLY BIRD" message upon application start.
- In data fields (e.g. RunningDF4 1), which have to be integrated into one of the Garmin native apps, the **FREE version** is active if you get a "FREE Version" notification upon session start and regularly after some minutes.

Some users reported that the **FREE version** is still active after entering the registration key and after synchronization. In all known cases, the wrong key has been entered. Please make sure that you enter the proper key and following the instructions below:

*Here some important registration hints:*

**Hint 1:** Please copy the registration key exactly in the given format (e.g. XXXX XXXX) into this text field:

- The registration key for individual applications or data fields is a hexadecimal number (numbers from 0 to 9 and big letters from A to F).
- The master key has the format "RH-SPORTS-xxxxxxx" where x must be a capital letter or a number.

The evaluation of the code is case-sensitive!

**Hint 2:** Please synchronize the settings with your watch afterwards. If you use Garmin Express software on PC or MAC, please disable the bluetooth connection between your mobile phone and watch during configuration as otherwise the settings might be overwritten again.

**Hint 3:** Sometimes it is necessary to reboot the watch once (for whatever reason).

**Hint 4:** Please use the prooper key for the selected standalone application or data field.

**Hint 5:** Please make sure that there are no floating point values in the app settings anymore (except for Swimming App where they are allowed).

## 2.8.8 What to do if GPS is not found upon start?

Sometimes it happens that GPS is not found during app startup and the app polls infinitely for a proper GPS signal. According to customer feedback this happens when the Garmin (sensor) firmware was updated. This is out of our control. Following workaround seems to do the trick:

- Once start a Garmin native app like running, cycling, etc.
- Wait until GPS is found.
- Stop the Garmin native app and start one of our apps.
- GPS should be found soon.

### Note:

Indoor it is sometimes very difficult for a device to find a proper GPS signal. So please make sure you do it outdoor.

## 2.8.9 How to enable GPS, GLONASS or GALILEO?

On Garmin devices with CIQ below 3.3.6, Garmin does not allow Connect IQ applications to controll which satellites are used. Following steps seem to help here as workaround:

- Once start a Garmin native app like running, cycling, etc.
- Select the required positioning sources in the settings of the native app.
- Stop the Garmin native app and start one of our apps.
- According to our information the selected sources of the native app are then used for our apps as well.

## 2.8.10 What to do in case of a app or data field crash upon start?

If you see following icon on your Garmin device upon application start or when you add a data field into a Garmin native app:

please completely uninstall and reinstall the application or data field. The setting file changed and the automated Garmin install is not replacing the setting file.

## 2.8.11 How to change the language?

Even though the main supported language is english we are working on supporting other languages as well. German language is currently available

- in some applications (e.g. RH-SPORTS HUB):
  - selected language on your [Garmin device](#) is used.
- for all applications and data fields for the settings you can change via Garmin mobile app or Garmin Express on PC/MAC:
  - selected system language in [Windows](#) or on [MAC](#) is used.

### Changing language on your smart watch

Changing the language on your Garmin watch can be done in two ways:

- **Method 1:** through the Garmin Connect app on your phone (easiest, especially if you can't read the current language on the watch) via following sequence (this requires an active Bluetooth connection between mobile phone and Garmin device):
  - Open the Garmin Connect app on your smartphone.
  - Open the menu:
    - Android: Tap the Menu icon (3 lines) in the top left.
    - iOS (iPhone): Tap More (3 dots) in the bottom right.
  - Tap Garmin Devices.
  - Select your specific watch image/name.
  - Select System (or General on some older models).
  - Tap Language (or Text Language).
  - Choose your desired language from the list.
  - Crucial Step: Go back to the main screen of the app and Sync your watch. The language on the watch will update once the sync finishes.
- **Method 2:** directly on the watch itself via menu by selecting 'System' and then 'Language'.

### Changing language on a windows system

Here the step-by-step guidance how to change the display language (menus, windows, settings) on a Windows system:

- For Windows 11:
  - Click Start (Windows icon) and select Settings (Gear icon).
  - On the left sidebar, click Time & language.
  - Click Language & region on the right.
  - Look for "Windows display language" at the top.
    - If your language is listed: Select it from the dropdown menu.
    - If your language is NOT listed:
      - Click the Add a language button next to "Preferred languages."
      - Search for your language (e.g., "Spanish") and select it. Click Next.
      - Important: Check the box that says "Set as my Windows display language."
      - Click Install.
  - Sign Out Required: Windows will ask you to sign out for changes to take effect. Click Sign out. When you sign back in, the language will be changed.
- For Windows 10:
  - Click Start and then Settings (Gear icon).
  - Click Time & Language.
  - Click Language on the left menu.
  - Look for "Windows display language" at the top.
    - If your language is listed: Select it from the dropdown menu.
    - If your language is NOT listed:
      - Click Add a language under the "Preferred languages" section.
      - Search for the language you want and select it. Click Next.
      - Check the box "Set as my Windows display language" (or "Install language pack").
      - Click Install.
  - Sign Out: You will see a prompt to sign out. Do so, and sign back in to see the changes.

### Changing language on a MAC system

Here the step-by-step guidance how to change the display language (menus, windows, settings) on a MAC system for macOS Ventura, Sonoma, Sequoia (Newer Models):

- Click the Apple Menu ( logo) in the top-left corner.
- Select System Settings.
- In the left sidebar, click General.
- Click Language & Region on the right.
- Under "Preferred Languages," click the (+) plus button.
- Select your desired language from the list and click Add.
- A pop-up will ask if you want to use this as your primary language. Click "Use [New Language]".
- Restart Required: You will be prompted to restart your Mac. Do this to apply the changes system-wide.

## 2.8.12 What to do if settings cannot be changed?

---

Setting changes always work in the Garmin eco-system and a valid connection to Garmin servers are necessary. Sometimes these servers are down and settings cannot be changed.

**Note:**

Unfortunately this is out of our control and we have to wait until Garmin fixed that problem.

In case the settings are corrupted, then following sequence may help:

- Delete app
- Synchronize
- Once reboot your device (e.g. watch)
- Install the app again
- Change settings

## 2.8.13 User settings lost after update?

---

Unfortunately Garmin may reset the user settings when updating the Garmin firmware version of the application or data field. This leads to the problem that all configurations are lost and the **FREE Version** is active again. I'm testing some work-arounds but so far I was not successful. As soon as I have updates, I will publish them here.

## 2.8.14 Activity not visible on Garmin Connect?

---

There could be several reasons why an activity is not visible on Garmin Connect:

- Activity recording was never started.
- Activity recording was not saved upon leaving the Garmin native app.
- No synchronization between device and Garmin Connect happened.
- Especially in indoor sessions it can happen that the device stays in Auto-Stop Mode. Please deactivate this feature in the user settings.
- Especially in indoor sessions no movements might be detected by the device. Thus distance stays 0. In such a case no activity results are stored on Garmin Connect.

## 2.8.15 Activity tracking and fitness metric accuracy

---

The app uses the Garmin API's to retrieve most of the information and cannot be more precise than the data delivered from there. Garmin states following about activity tracking and accuracy:

- "Garmin devices are intended to be tools to provide you with information to encourage an active and healthy lifestyle. Garmin wearables rely on sensors that track your movement and other metrics. The data and information provided by these devices is intended to be a close estimation of your activity and metrics tracked, but may not be precisely accurate. Garmin wearables are not medical devices, and the data provided by them is not intended to be utilized for medical purposes and is not intended to diagnose, treat, cure, or prevent any disease. Garmin recommends you consult your doctor before engaging in any exercise routine."

## 2.8.16 Accuracy of wrist-based heart rate (Elevate)

The app uses the Garmin API to retrieve heart rate related data cannot be more precise than the data delivered from there. Regarding wrist-based accuracy, Garmin states following:

- "The optical wrist heart rate (HR) monitor for Garmin wearables is a valuable tool that can provide an accurate estimation of the user's heart rate at any given point in time. The optical HR monitor is designed to attempt to monitor a user's heart rate 24 hours a day, 7 days a week. The frequency at which heart rate is measured varies, and may depend on the level of activity of the user. When you start an activity with your Garmin optical HR device, the optical HR monitor measures more frequently. The intent is to provide the user with a more frequent and accurate heart rate reading during a given activity."
- "While our wrist HR monitor technology is state of the art, there are inherent limitations with the technology that may cause some of the heart rate readings to be inaccurate under certain circumstances. These circumstances include the user's physical characteristics, the fit of the device and the type and intensity of the activity as outlined above. The HR monitor data is not intended to be used for medical purposes, nor is it intended to diagnose, treat, cure or prevent any disease or condition."
- "Wrist heart rate accuracy during swimming is very limited. Garmin does not recommend using wrist heart rate during swimming activities and on some products, wrist heart rate monitoring is disabled while swimming. Garmin recommends using HRM-Swim™ or HRM-Tri™ heart rate monitors with compatible devices to track heart rate while swimming."

## 2.8.17 Is there a way to enable/disable GLONASS?

The GPS/GLONASS setting is based on what was last used in the Garmin native apps (like cycling, running). Garmin does not allow Connect-IQ apps or data fields to change this setting.

## 2.8.18 Why is info derived from altitude (e.g, UP, DOWN, PWR, GRADE in %) not accurate?

People with Garmin devices (e.g. watches) are frequently concerned about the accuracy (or lack of it) of the altitude data (or from altitude derive data) if the info is derived from GPS and not from a barometric altimeter. Many suspect their equipment or the app may even be defective or buggy when they see the altitude data. Unfortunately this is NORMAL as GPS is not accurate enough regarding altitude information. Following Garmin devices have no barometric altimeter and are thus affected (list might not be complete):

- ForeAthlete® 230J, ForeAthlete® 235J, ForeAthlete® 630J.
- Forerunner® 735XTJ, ForeAthlete® 920XTJ, Forerunner® 230, Forerunner® 235, Forerunner® 630, Forerunner® 735XT.
- Vivoactive™ series.
- Others: [Please take a look to the Garmin feature set description for your device.](#)

With the integrated GPS receivers, the horizontal error is specified to be within about +/- 15 meters (50 feet) 95% of the time. Most users find this is a conservative specification and that their modern GPS receivers routinely perform better than this worst case specification. But users should expect that SOMETIMES they may see the error approach the specification limits. AND 5% of the time, the error may be "any value" from zero to whatever. Note: Unless you have a CLEAR AND UNOBSTRUCTED view of the sky you can count on your error excursions to be much greater than the above numbers. Your GPS depends on this clear and unobstructed view or it cannot make accurate range measurements to the satellites. Generally, altitude error is specified to be 1.5 times horizontal error specification. This means that the user of standard consumer GPS receivers should consider +/-23meters (75ft) with a DOP of 1 for 95% confidence. Altitude error is always considerably worse than the horizontal (position error). Much of this is a matter of geometry. If we (simplistically) consider just four satellites, the "optimum" configuration for best overall accuracy is having the four SVs at 40 to 55 degrees above the horizon and one (for instance) in each general direction N, E, W, and S.

### Note:

You will get a very BAD DOP if the SVs are at the exact same elevation. Luckily, this is a rare occurrence. The similar "best" arrangement for vertical position is with one SV overhead and the others at the horizon and 120 degrees in azimuth apart. Obviously, this arrangement is very poor from a signal standpoint. As a result, of this geometry the calculated solution for altitude is not as accurate as it is for horizontal position. Almost any calibrated altimeter will be more stable at reading altitude than a GPS. GPS altitude measures the user's distance from the center of the SVs orbits. These measurements are referenced to geodetic altitude or ellipsoidal altitude in some GPS equipment. Garmin and most equipment manufacturers utilize a mathematical model in the GPS software which roughly approximates the geodetic model of the earth and reference altitude to this model. As with any model, there will be errors as the earth is not a simple mathematical shape to represent. What this means is that if you are walking on the seashore, and see your altitude as -15 meters, you should not be concerned. First, the geodetic model of the earth can have much more than this amount of error at any specific point and Second, you have the GPS error itself to add in. As a result of this combined error, I am not surprised to be at the seashore and see -40 meter errors in some spots.

Following data fields are affected if you have no watch with barometric altimeter:

- UP
- DOWN
- GRADE in %
- PWR, A PWR, M PWR (if not derived from a compatible ANT+ power sensor)
- VSPD xs, A VSPD, M VSPD

## 2.9 Backlog

---

This section shows the backlog with potential features planned for upcoming releases:

- Power saving modes
- Add sensor history on devices where Garmin supports this feature

**Note:**

Please note that there is no guarantee if and when the feature will be implemented!

## 2.10 Version history

---

The following table lists the version history of the latest released **Skiing App Professional** versions:

| Version | Date       | Change description                                                                                                                                                                                                     |
|---------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5.5.5   | 02.01.2026 | Support for Instinct® 3 AMOLED 50mm added                                                                                                                                                                              |

| 3.8.0 | 28.01.2022 | <p>Support for Epix™ 2 added</p> <p>Support for Fenix® 7, Fenix® 7s and Fenix® 7x added</p>                                                                                                                                                                                                                                                                                                                                                                                     |

## 3. Deutsch

---

### 3.1 Deutsche Dokumentation

---

Diese Seite beinhaltet die deutschen Dokumente für alle Garmin Connect-IQ-kompatiblen Applikationen und Datenfelder von RH-SPORTS.

Aktuell ist nur eine Liste aller Datenfelder in deutscher Beschreibung verfügbar.

**Note:**

Die Dokumentation in deutscher Sprache ist in Arbeit und kommt in den nächsten Monaten sukzessive für alle verfügbaren Applikationen.

### 3.1.1 Datenfelder

---

Folgende Tabelle beschreibt alle Datenfelder unserer Garmin Connect-IQ kompatiblen Apps (mit Ausnahme der Skiing App). Bitte berücksichtigen Sie folgende zwei Punkte:

- Einige Datenfelder sind nur in der **PREMIUM Version** verfügbar.
- Nicht jedes Datenfeld ist in jeder angebotenen Applikation oder Datenfeld verfügbar.

| Datenfeld | Beschreibung                                                                                                                                                                                                                                                                                                                           |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AHEAD     | Aktuelle Zeit die Sie vor (bei positivem Wert) oder hinter (bei negativem Wert) dem konfiguriertem Rennziel liegen. Die Angabe ist im Format hh:mm, h:mm:ss, mm:ss oder m:ss.                                                                                                                                                          |
| ALT       | Aktuelle Höhe in Meter oder Fuß, abhängig von den Einstellungen auf der Uhr für Höhe.                                                                                                                                                                                                                                                  |
| A CAD     | Durchschnittliche Trittfrequenz in Umdrehungen pro Minute, gemittelt über die gesamte Trainingseinheit.<br><br>Anmerkung:<br>In der Cycling App Professional werden nur jene Zeiten berücksichtigt, wo auch wirklich getreten wird. In Garmin Connect ist allerdings der Wert gespeichert, der auch die Zeiten ohne Treten beinhaltet. |
| A HR      | Durchschnittliche Herzfrequenz in Schläge pro Minute gemittelt über die gesamte Trainingseinheit.                                                                                                                                                                                                                                      |
| A PACE    | Durchschnittliche Pace der aktuellen Trainingseinheit für einen Kilometer oder eine Meile, abhängig von den Einstellungen auf der Uhr für Pace/Geschwindigkeit.                                                                                                                                                                        |
| A PWR     | Durchschnittliche Power in der aktuellen Trainingseinheit in Watt. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 4</a>                                                                                                                                                                                                          |
| A SPEED   | Durchschnittliche Geschwindigkeit der aktuellen Trainingseinheit in Kilometer/Stunde oder Meilen/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                       |
| A VSPD    | Durchschnittliche vertikale Geschwindigkeit in der aktuellen Trainingseinheit in Meter/Stunde oder Fuß/Stunde, abhängig von den Einstellungen auf der Uhr. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 1</a>                                                                                                                  |
| CAD       | Aktuelle Trittfrequenz in Umdrehungen pro Minute.                                                                                                                                                                                                                                                                                      |
| CL DIST   | Distanz der aktuellen Runde in Kilometer oder Meilen, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                                          |
| CL PACE   | PACE der aktuellen Runde für einen Kilometer oder eine Meile, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                                  |
| CL SPEED  | Durchschnittsgeschwindigkeit der aktuellen Runde in Kilometer/Stunde oder Meilen/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                       |
| CL TIME   | Aktuelle Rundenzeit im Format hh:mm, h:mm:ss, mm:ss oder m:ss.                                                                                                                                                                                                                                                                         |
| CR AHR    | Durchschnittliche Herzfrequenz während der aktuellen Abfahrt in Schläge pro Minute.                                                                                                                                                                                                                                                    |
| CR DOWN   | Aktuelle negative Höhenmeter während der aktuellen Abfahrt in Meter oder Fuß, abhängig von den Einstellungen auf der Uhr für Höhe.                                                                                                                                                                                                     |
| CR DIST   | Zurückgelegte Strecke der aktuellen Abfahrt in Kilometer oder Meilen, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                          |
| CR MHR    | Maximale Herzfrequenz während der aktuellen Abfahrt in Schläge pro Minute.                                                                                                                                                                                                                                                             |
| CR MSPD   | Maximale Geschwindigkeit der aktuellen Abfahrt in Kilometer/Stunde oder Meilen/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                         |
| DBG1      | Debug Datenfeld das aktuell den minimalen freien Speicher anzeigt.                                                                                                                                                                                                                                                                     |
| DIST      | Aktuell zurückgelegte Strecke in Kilometer oder Meilen, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                                        |
| DIST REM  | Noch zu laufende Strecke in Kilometer oder Meilen, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                                             |
| DOWN      | Absteigende Höhenmeter in der aktuellen Trainingseinheit in Meter oder Fuß, abhängig von den Einstellungen auf der Uhr für Höhe. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 1</a>                                                                                                                                            |
| ELAPS     | Vergangene Zeit in der aktuellen Trainingseinheit (inkl. Standzeiten bei eingeschaltetem Auto Start/Stop Feature) im Format hh:mm, h:mm:ss, mm:ss oder m:ss.                                                                                                                                                                           |
| ETA       | Geschätzte Ankunftszeit auf Basis Ihrer Konfigurationen im Format hh:mm, h:mm:ss, mm:ss oder m:ss.                                                                                                                                                                                                                                     |
| GRADE %   | Aktuelle Steigung in Prozent. Diese Information wird abgeleitet von der zurückgelegten Strecke und Höhe gemittelt über die letzten 10 Sekunden. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 2</a>                                                                                                                             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| PWR      | Aktuelle Leistung in Watt. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 4</a>                                                                                                                                                              |
| PWR xs   | Leistung in Watt gemittelt über die letzten x Sekunden. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 4</a>                                                                                                                                 |
| RUNS     | Gesamtanzahl der bereits getätigten Abfahrten.                                                                                                                                                                                                     |
| R AHR    | Durchschnittliche Herzfrequenz in Schläge pro Minute gemittelt über alle Runs (=Abfahrten).                                                                                                                                                        |
| R ASPD   | Durchschnittlich Geschwindigkeit aller Abfahrten in Kilometer/Stunde oder Meilen/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                   |
| R AVSPD  | Durchschnittlich vertikale Geschwindigkeit aller Abfahrten in Meter/Stunde oder Fuß/Stunde, abhängig von den Einstellungen auf der Uhr. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 1</a>                                                 |
| R DIST   | Aktuell zurückgelegte Abfahrtsstrecke in Kilometer oder Meilen, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                            |
| R TIME   | Vergangene Zeit aller Abfahrten im Format hh:mm, h:mm:ss, mm:ss oder m:ss.                                                                                                                                                                         |
| R MHR    | Maximale Herzfrequenz aus allen Abfahrten in Schläge pro Minute.                                                                                                                                                                                   |
| R MSPD   | Maximale Geschwindigkeit aller Abfahrten in Kilometer/Stunde oder Meilen/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                           |
| R MVSPD  | Maximale vertikale Geschwindigkeit aller Abfahrten in Meter/Stunde oder Fuß/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                        |
| SPEED    | Aktuelle Geschwindigkeit in Kilometer/Stunde or Meilen/Stunde, abhängig von den Einstellungen auf der Uhr.                                                                                                                                         |
| STEPS    | Anzahl der zurückgelegten Schritte in der aktuellen Trainingseinheit.                                                                                                                                                                              |
| STEPS T  | Anzahl der zurückgelegten Schritte am heutigen Tag.                                                                                                                                                                                                |
| STEP G   | Schrittziel für den heutigen Tag.                                                                                                                                                                                                                  |
| STEP G%  | Aktueller Prozentsatz für die Zielerreichung der Schritte für den heutigen Tag.                                                                                                                                                                    |
| TEMP     | Aktuelle Temperatur in Celsius oder Fahrenheit, abhängig von den Einstellungen auf der Uhr für Temperatur. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 3</a>                                                                              |
| TIME     | Aktuelle Tageszeit 12- oder 24-Stundenformat, abhängig von den Einstellungen auf der Uhr.                                                                                                                                                          |
| UP       | Aufsteigende Höhenmeter in der aktuellen Trainingseinheit in Meter oder Fuß, abhängig von den Einstellungen auf der Uhr für Höhe. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 1</a>                                                       |
| VSPD xs  | Aktuelle vertikale Geschwindigkeit in der aktuellen Trainingseinheit in Meter/Stunde oder Fuß/Stunde gemittelt über die letzten x Sekunden, abhängig von den Einstellungen auf der Uhr. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 2</a> |

### 3.1.2 Anmerkungen

#### Anmerkung 1

Diese Information ist nur dann genau genug wenn die Uhr über einen barometrischen Höhenmesser verfügt. Eine Ableitung der Höheninformation über GPS ist zwar möglich aber ungenau.

#### Anmerkung 2

Diese Information ist nur dann genau genug wenn Sie über einen ANT+ Geschwindigkeitssensor und eine Uhr mit barometrischem Höhenmesser verfügen. Speziell die Höheninformation ist aufgrund physikalischer Grundsätze sehr ungenau, wenn sie von GPS abgeleitet wird und für Differenzmessungen verwendet wird.

**Anmerkung 3**

Eine Temperatur-Messung in Garmin Apps funktioniert nur dann wenn Sie über einen ANT+ TEMPE Sensor verfügen.

**Anmerkung 4**

Diese Information ist nur dann genau genug wenn Sie über einen ANT+ Power Sensor verfügen. Alternative ist auch eine Schätzung der Leistung implementiert, die aber für brauchbare Genauigkeit einen barometrischem Höhenmesser benötigt.
