## 1. User documentation

---

Welcome to the **Cycling DF4 (Variant 2)** user documentation which is a data field and has to be integrated into one of the Garmin native apps.

[Download PDF](#)

## 2. English

---

### 2.1 CyclingDF4 2

---

The **CyclingDF4 2**, running on all Connect IQ™-compatible Garmin devices with CIQ 2 or higher, is designed as a data field focusing on improving your cycling or MTB performance. It is NO standalone application but has to be added to one of the different Garmin native applications like running or cycling. The data field shows the current heart rate as colored value and gauge as well as three freely configurable additional metrics of your workout session.

**Note:**

This data field is optimized for best possible readability.

The main idea behind data fields is to use the native Garmin apps which offers features which cannot be accessed through the Garmin API in 3rd-party apps (e.g. map support, workout support, etc.) and extend its functionality with new features.

**Note:**

Due to memory constraints, data fields will only be available on newer Garmin devices with at least 32 kB of memory for data fields!

[Link to CyclingDF4 2 on Garmin App Store](#)

This website provides further information regarding requirements, installation, getting started, supported data fields and features as well as frequently asked questions.

## 2.2 Disclaimer

---

### 2.2.1 Software disclaimer

---

Our offered applications, widgets and data fields (further on simply called software), which can be downloaded from the Garmin App Store, are provided 'as is' without warranty of any kind, either express or implied, including, but not limited to, the implied warranties of fitness for a purpose, or the warranty of non-infringement. Without limiting the foregoing, Robert Hofer (RH-SPORTS) makes no warranty that:

- the software will meet your requirements.
- the software will be uninterrupted, timely, secure or error-free.
- the results that may be obtained from the use of the software will be effective, accurate or reliable.
- the quality of the software will meet your expectations.

Software and documentation on our web site:

- could include technical or other mistakes, inaccuracies or errors.
- may be out of date where we make no commitment to update the it right away.
- we assume no responsibility for errors or omissions in the software or documentation available from our web sites.
- Robert Hofer (RH-SPORTS) has the right to change the software or documentation anytime.

In no event shall we be liable to you or any third parties for any special, punitive, incidental, indirect or consequential damages of any kind, or any damages whatsoever, including, without limitation, those resulting from loss of use, data or profits, whether or not we have been advised of the possibility of such damages, and on any theory of liability, arising out of or in connection with the use of this software.

The use of the software downloaded is done at your own discretion and risk and with agreement that you will be solely responsible for any damage to your computer system, watch of navigation device or loss of data that results from such activities. No advice or information, whether oral or written, obtained by you from us by mail or from our web sites shall create any warranty for the software.

### 2.2.2 User data protection according to DSGVO

---

RH-SPORTS clearly wants to state that we do not collect or save user information of any kind. If you are using our applications or data fields and save the recorded session afterwards then the data will be fully processed by Garmin Ltd. or its subsidiaries. This might include that the recorded data is sent to servers hosted or paid for by Garmin. Please read the user data protection rules from Garmin for further details.

Following applications offer map support:

- Cycling App Professional
- Hiking App Professional
- MTB App Professional
- SkiTour App Professional

These applications do not directly track personal information but makes use of a 3rd party API provided by dynamicWatch which does store personal information on every data request. You can read the detailed privacy policy of dynamicWatch [here](#).

### 2.2.3 Activity tracking and fitness metric accuracy

---

Our applications and data fields use the Garmin API's to retrieve most of the information and cannot be more precise than the data delivered from there. Garmin states following about activity tracking and accuracy:

- "Garmin devices are intended to be tools to provide you with information to encourage an active and healthy lifestyle. Garmin wearables rely on sensors that track your movement and other metrics. The data and information provided by these devices is intended to be a close estimation of your activity and metrics tracked, but may not be precisely accurate. Garmin wearables are not medical devices, and the data provided by them is not intended to be utilized for medical purposes and is not intended to diagnose, treat, cure, or prevent any disease. Garmin recommends you consult your doctor before engaging in any exercise routine."

## 2.2.4 Accuracy of wrist-based heart rate (Elevate)

---

Our applications and data fields use the Garmin API's to retrieve heart rate related data cannot be more precise than the data delivered from there. Regarding wrist-based accuracy, Garmin states following:

- "The optical wrist heart rate (HR) monitor for Garmin wearables is a valuable tool that can provide an accurate estimation of the user's heart rate at any given point in time. The optical HR monitor is designed to attempt to monitor a user's heart rate 24 hours a day, 7 days a week. The frequency at which heart rate is measured varies, and may depend on the level of activity of the user. When you start an activity with your Garmin optical HR device, the optical HR monitor measures more frequently. The intent is to provide the user with a more frequent and accurate heart rate reading during a given activity."
- "While our wrist HR monitor technology is state of the art, there are inherent limitations with the technology that may cause some of the heart rate readings to be inaccurate under certain circumstances. These circumstances include the user's physical characteristics, the fit of the device and the type and intensity of the activity as outlined above. The HR monitor data is not intended to be used for medical purposes, nor is it intended to diagnose, treat, cure or prevent any disease or condition."
- "Wrist heart rate accuracy during swimming is very limited. Garmin does not recommend using wrist heart rate during swimming activities and on some products, wrist heart rate monitoring is disabled while swimming. Garmin recommends using HRM-Swim™ or HRM-Tri™ heart rate monitors with compatible devices to track heart rate while swimming."

## 2.2.5 White background on AMOLED displays

---

For devices with AMOLED display (e.g. Venu™ based devices) we strongly recommend to always select the black background to avoid damages due to burn-in effects and to save battery life time!

**Note:**

We take over NO responsibility in case of damages due to burn-in effects.

## 2.3 Requirements

---

### Supported Garmin devices

The **CyclingDF4 2** data field runs on most Garmin devices but there is a difference in functionality between devices with less than 32 kB of memory and devices with more memory for 3rd party data fields.

List of devices with 32 kB or less memory for data fields:

- Approach® S60
- Captain Marvel
- Darth Vader™
- D2™ Air
- Fēnix® Chronos
- Fēnix® 5 and 5s
- Fēnix® 6 and 6s
- First Avenger
- Forerunner® 55, 245, 645 and 935
- ForeAthlete® 735XTJ
- Rey™
- Venu™ and Venu™ Mercedes-Benz® Collection
- Venu™ SQ and Venu™ SQ Music
- Vivoactive™ HR
- Vivoactive® 3, Vivoactive® 3 Music, Vivoactive® 3m LTE, Vivoactive® 3 Mercedes-Benz® Collection
- Vivoactive® 4 and 4s

List of devices with more than 32 kB of memory:

- Approach® S50
- Approach® S62
- Approach® S70 42mm and 47mm
- D2™ Air X10
- D2™ Charlie
- D2™ Delta, D2™ Delta PX, D2™ Delta S
- D2™ Mach 1
- Descent™ G2
- Descent™ MK1, Descent™ MK2, Descent™ MK2s
- Descent™ Mk3 43mm and 51mm
- Enduro™ and Enduro™ 3
- Epix™ 2, Epix™ Pro (Gen 2) 42mm, 47mm and 51mm
- Fēnix® 5X
- Fēnix® 5 Plus, Fēnix® 5S Plus, Fēnix® 5X Plus
- Fēnix® 6 Pro and 6s Pro
- Fēnix® 6x Pro, 6x Sapphire, 6x Pro Solar and tactix® Delta Sapphire
- Fenix® 7, Fenix® 7s and Fenix® 7x
- Fenix® 7 Pro, Fenix® 7s Pro and Fenix® 7x Pro
- Fēnix® 7 Pro (no Wi-Fi) and Fēnix® 7x Pro (no Wi-Fi)
- Fenix® 8 43mm, 47mm, 51mm and Fenix® 8 Solar 47mm, 51mm
- Fenix® 8 Pro 47mm, 51mm and MicroLED
- Fenix® E
- Forerunner® 165, 165 Music, 245 Music, 255, 255 Music, 255s, 255s Music, 265 and 265s
- Forerunner® 570 42mm and 47mm, 645 Music, 735XT, 945, 945 LTE, 955, 955 Solar, 965 and 970
- Instinct® 3 AMOLED 45mm and 50mm
- Instinct® Crossover AMOLED
- MARQ™ Adventurer, Athlete, Aviator, Captain, Commander, Driver, Expedition and Golfer
- MARQ® (Gen 2) Athlete, Adventurer, Captain, Golfer and Aviator
- Venu™ 2, Venu™ 2 Plus, Venu™ 2s
- Venu™ SQ 2 and Venu™ SQ 2 Music
- Venu® 3 and Venu® 3s
- Venu® 4 41mm and 45mm
- Venu® X1
- Vivoactive® 5 and 6

Following Edge® devices are supported as well:

- Edge® 520, 520 Plus and 820
- Edge® 530, 540 and 830
- Edge® 540 and 840 Solar
- Edge® 1000
- Edge® Explore
- Edge® Explore 2
- Edge® 1030, 1030 Bontrager and 1030 Plus
- Edge® 1040 and 1040 Solar

**Garmin device firmware requirements**

Please install the latest firmware on your Garmin device. Here the information about the minimum required Connect IQ™ version depending on your device type:

- V2.4.1
  - Approach® S60
  - ForeAthlete® 735J
  - Forerunner® 735XT
  - Vivoactive® HR
- V3.0.0
  - Approach® S62
  - D2® Charlie
  - D2® Delta, D2® Delta PX, D2® Delta S
  - Descent™ MK1
  - Vivoactive® 3 Mercedes-Benz® Collection
- V3.1.0
  - Descent™ MK2
  - Fēnix® Chronos
  - Fēnix® 5, Fēnix® 5S, Fēnix® 5X and Fēnix® 5 Quatix
  - Fēnix® 5 Quatix
  - Fēnix® 5 Plus, Fēnix® 5S Plus, Fēnix® 5X Plus
  - Forerunner® 935
  - Forerunner® 645 and 645 Music
  - Vivoactive® 3
- V3.2.0
  - Captain Marvel
  - Darth Vader™
  - D2™ Air
  - Descent™ MK2s
  - Enduro™
  - Fēnix® 6 and 6 Pro
  - Fēnix® 6s and 6s Pro
  - Fēnix® 6x Pro, 6x Sapphire, 6x Pro Solar and tactix® Delta Sapphire
  - First Avenger
  - Forerunner® 55, 245, 245 Music, 745 and 945
  - MARQ™ Adventurer, Athlete, Aviator, Captain, Commander, Driver, Expedition and Golfer
  - Rey™
  - Venu™ SQ and Venu™ SQ Music
  - Venu™ and Venu™ Mercedes-Benz® Collection
  - Vivoactive® 3 Music, Vivoactive® 3 Music LTE
  - Vivoactive® 4s and 4
- V3.3.0
  - Forerunner® 945 LTE
- V4.0.0
  - D2™ Air X10
  - D2™ Mach 1
  - Venu™ 2, Venu™ 2 Plus, Venu™ 2s

- V4.1.0
  - Fenix® 7, Fenix® 7s and Fenix® 7x
  - Forerunner® 255, 255 Music, 255s and 255s Music
  - Forerunner® 955 and Solar
  - MARQ® (Gen 2) Athlete, Adventurer, Captain, Golfer and Aviator
  - Venu™ SQ 2 and Venu™ SQ 2 Music
- V4.2.0
  - Approach® S70 42mm and 47mm
  - Descent™ Mk3 43 and 51mm
  - Epix™ 2
  - Epix™ Pro (Gen 2) 42mm, 47mm and 51mm
  - Fenix® 7 Pro, Fenix® 7s Pro and Fenix® 7x Pro
  - Fēnix® 7 Pro (no Wi-Fi) and Fēnix® 7x Pro (no Wi-Fi)
  - Forerunner® 165 and 165m
  - Forerunner® 265 and 265s
  - Forerunner® 965
  - Venu® 3 and Venu® 3s
  - Vivoactive® 5
- V5.0.0
  - Approach® S50
  - Descent™ G2
  - Enduro™ 3
  - Fenix® 8 43mm
  - Fenix® 8 47 and 51mm
  - Fenix® 8 Solar 47 and 51mm
  - Fenix® E
  - Instinct® 3 AMOLED 45 and 50mm
  - Vivoactive® 6
- V5.1.0
  - Fenix® 8 Pro 47mm, 51mm and MicroLED
  - Forerunner® 570 42mm and 47mm
  - Forerunner® 970
  - Instinct® Crossover AMOLED
  - Venu® X1
- V5.2.0
  - Venu® 4 41mm and 45mm

**Note:**

Please also take a look to the [Garmin feature set description](#) for your device.

**Garmin software requirements**

- Please install the latest Garmin Connect App if you use the mobile phone for installation and configuration.
- Please install the latest Garmin Express Version if you use the PC/MAC for installation and configuration.

## 2.3.1 Sensor requirements

---

- Please enable GPS for speed, distance, location and altitude information.
- Please enable ANT+ sensors for heart rate, foot pod, speed and power information.

**Note:**

For Garmin devices which do not natively support a power sensor, the pairing is done automatically within this data field.

## 2.4 Getting started

---

This section describes everything you need to know to get **CyclingDF4 2** up and running on your Garmin device.

Topics:

- [Install application](#)
- [Change user settings](#)
- [Start application](#)
- [User setting overview](#)

### 2.4.1 Install data field

---

Please install the **CyclingDF4 2** data field by downloading it from the Garmin App Store via the Garmin Express Software on PC/MAC or via the Garmin ConnectIQ mobile app on your mobile phone.

[Link to CyclingDF4 2 on Garmin App Store](#)

#### Install instructions:

This is NO application but a data field. In order to use it, you will need to set up a screen with only one field and select **CyclingDF4 2** from the Connect IQ fields options. The whole screen is needed for displaying all the information which can highly be configured via settings.

Here's how you can set it up:

- Download the data field to your watch.
- Open the activity you want to add the data field to (e.g., Running, Cycling or Walking/Hiking).
- Press and hold the "Up" button until the menu appears.
- Select "Run settings" (usually the first option) and then choose "Data Screens"
- Scroll down and choose "Add New".
- Select "Custom Data" and then choose a layout with just ONE field (Field 1).
- Finally, choose "ConnectIQ Fields" and select the **CyclingDF4 2** data field.

Once you've completed these steps, you'll have everything you need for a run on just one screen.

If you require further assistance with setting up data fields for your device, please refer to this [link for instructions](#).

### 2.4.2 Change the user settings

---

The **CyclingDF4 2** in the PREMIUM version offers a huge amount of [configuration options](#) which can be changed on your PC/MAC your or on your mobile phone:

- [Change User Settings on PC/MAC](#)
- [Change User Settings on Mobile Phone](#)

#### Change user settings on PC or MAC

All configurations can be changed on your PC or MAC by using the Garmin Express Software. Before changing configurations, please make sure that you have installed the latest software version. The software can be downloaded from the official Garmin web site.

**Step 1: Start Garmin Express Software** Look for the symbol as shown below and double-click it to start the Garmin Express software.

After that you should be able to see your Garmin device as shown in the picture below. If not, please add your device first. For details refer to the documentation provided by Garmin.

**Step 2: Establish Connection between PC/MAC and the Garmin Device** Connect your device via USB to your PC/MAC. Your device should be automatically detected and the Garmin Express software starts a synchronization process. When everything is ok, it is signaled via green lights as shown in the figure below. In case problems occur, please refer to the documentation provided by Garmin.

**Step 3: Select Device** Please click on the icon which shows your device. Following picture should appear:

**Step 4: Find our Apps** Please click the marked button in the picture above. A list of all installed applications on your device should appear. Please scroll up/down until you find the application you would like to configure as shown in the figure below:

**Step 5: Select App for Configuration** Please select the application you would like to configure by clicking with the left mouse button to the three dots as marked in the left picture above to the app of your choice as shown in the right picture above. A context menu will be shown where you have to select "Settings"

Following screen should appear:

**Step 6: Change Configuration** Please note that configuration changes ONLY apply on your Garmin device if you have entered the proper PREMIUM key in the field marked in the picture below. The key consists of two times four characters separated by a space in between. If the proper key is entered, please make the configurations according to your needs and press the "Save" button at the end. The Garmin Express Software will update the configurations on your device. In case of errors, please refer to the documentation provided by Garmin.

**Step 7: Disconnect Device** After the configuration changes were saved, disconnect your device from the PC/MAC.

**Step 8: Start Application on Device** Please start your application on your Garmin device. If you have the PREMIUM Version (key was correct), then your configuration changes should have been applied. If not, please refer to our Frequently Asked Questions.

#### Change user settings on mobile phone

All configurations can be changed on your mobile phone by using the Garmin Connect(TM) Mobile app which is available for Android-, iOS- and Windows-compatible devices. Before changing configurations, please make sure that you have installed the latest app version. The app can be downloaded from the appropriate App Store (e.g. Google Play, Apple Store, etc.)

**Step 1: Start Garmin Connect Mobile App** Look on your mobile phone for the app with the symbol shown on the left side and click it to start the Garmin Connect™ Mobile app.

A similar window as shown below should appear.

**Step 2: Look for Garmin Devices List** After pressing the button with the dots on the lower right side (as marked above) a new windows appears. Please scroll down until you find the entry "Garmin Devices".

**Step 3: Select your Garmin Devices** After pressing the button marked above, a window with all your registered Garmin devices appears (see picture below). If you cannot find your device, please add it before by clicking on the upper right "+" sign. For further details, please refer to the documentation offered by Garmin. Then select one of your connected device.

**Step 4: Select Activities and Apps** Please click the marked button in the picture below following by clicking to applications.

**Step 5: Select an Application for Configuration** A list of all applications appear. Please scroll up/down until you find the application you would like to configure as shown in the figure below:

**Step 6: Select Settings** Please click on Settings as marked below.

**Step 7: Change Configuration** Please note that configuration changes ONLY apply on your device if you have entered the proper PREMIUM key in the field marked in the picture below. The key consists of two times four characters separated by a space in between. If the proper key is entered, please make the configurations according to your needs.

**Step 8: Save Configurations** Finally scroll down and press the "Save" button. The Garmin Mobile App will update your configurations on your device. In case of communication errors, please refer to the documentation provided by Garmin.

**Step 9: Start Application on Device** Please start your application on your device. If you have the PREMIUM Version (key was correct), then your configuration changes should have been applied. If not, please refer to our *Frequently Asked Questions*.

## 2.4.3 Start the data field

Pre-Condition:

- Please add the data field to your Garmin native application [as described here](#)

Perform following steps to use the data field:

- Go into the activity where you want to change the data fields (Run, Run Indoor, etc...)
- Go into Menu->Activity Settings->Data Screens
- Go to screen 1 or 2, etc.
- Select layout (it will take you to the data screen and you use <> to add/remove number of data fields); then back once
- Select data field 1 (as an example - could be 1,2,3,4)
- Select Connect IQ
- Select the custom data field you wish to use.
- Repeat for any other fields you wish to replace.

## 2.4.4 Change user settings

### Registration key for PREMIUM version

After successful donation you receive a mail with the PREMIUM activation key(s). Please copy the registration key exactly in the given format (XXXX XXXX) into this text field. The registration key evaluation is case sensitive and no spaces are allowed at the beginning or end. One space is mandatory after the fourth character.

Registration Key for PREMIUM Version where ALL configurations apply.

XXXX XXXX

Here some important registration hints:

**Hint 1:** Please copy the registration key with 9 characters length exactly in the given format (XXXX XXXX) into this text field. The registration key is a hexadecimal number (numbers from 0 to 9 and big letters from A to F) and the evaluation is case sensitive. No spaces are allowed at the beginning or end. One space is mandatory after the fourth character.

**Hint 2:** Users reported that on some devices (e.g. Android-based mobile phones) more than one space is added when copying the key to the app settings field. Please make sure that there is exactly one space after the fourth character.

**Hint 3:** Please synchronize the settings with your watch afterwards. If you use Garmin Express software on PC or MAC, please disable the bluetooth connection between your mobile phone and watch during configuration as otherwise the settings might be overwritten again.

**Hint 4:** Sometimes it is necessary to reboot the watch once (for whatever reason).

**Hint 5:** Please use the right key for the selected application or data field.

**Hint 6:** Please make sure that there are no floating point values in the app settings anymore (except for Swimming App where they are allowed).

### ANT+ power sensor pairing

This application or data field is supporting the ANT+ power sensor profile even on devices where Garmin does not support this natively itself.

In all cases, the ANT+ power sensor needs to be paired with the device before it can be used. Where Garmin supports the power profile natively, the pairing must be done via the watch settings. This is fully controlled by Garmin.

Where Garmin does NOT support the power profile natively, the pairing is done automatically by the application or data field upon start. Even an automatic re-pairing is implemented during the session, if the connection to the power sensor gets lost. In order to avoid that a pairing is done to a wrong ANT+ power sensor (e.g. to one of the colleagues you ride with), the user can set the application or data field specific setting for "Paired ANT+ power sensor ID" to one of the following values:

- -1 means that a pairing to any ANT+ power sensor is possible and that this ID is NEVER locked. Upon re-connection a different power sensor might be found and used. This setting e.g. makes sense when you have more bikes with power sensors and change them regular and you ride alone. Because then you do not have to update the pairing information in the settings.
- 0 means that a pairing to any ANT+ power sensor is possible and that this ID is locked when found first. The sensor specific ID is then automatically entered into this field and a re-pairing is only possible to the same power sensor with this ID.
- other values mean that a pairing is only possible to that specific ID anymore. It can be set to -1 or 0 at any time by the user to allow a pairing to other sensors again.

#### Note:

By default the value -1 is set for legacy reasons to allow pairing to all ANT+ power sensors!

### Color scheme

This option allows you to select the background and text color.

Following options are available:

- White background with black text color and grey header/footer
- Black background with white text and grey header/footer
- White background with black text and inverted colors in header/footer
- Black background with white text and inverted colors in header/footer

Please refer to following picture for better illustration:

**Note:**

By default the option with "Black background with white header/footer" is used for best readability on all devices!

**Note:**

One Edge® devices, the color scheme is taken from the settings in the Garmin native app and not from the data field settings!

**Note:**

For devices with AMOLED display (e.g. Venu™ based devices) we strongly recommend to always select the black background to avoid damages due to burn-in effects and to save battery life time!

#### 4-field data page

This option allows you to freely select the content of all 4-field data pages out of a huge list of all available data fields (even during the ongoing training session). This enables you to adjust all fields completely according to your personal preferences.

For an overview of available data fields, please [click here](#)!

## 2.5 Data fields

---

This section gives you an overview about all data fields of the **CyclingDF4 2**.

### 2.5.1 Data field table

---

Below the table with all available data fields:

**Note:**

Please note that some of them require the **PREMIUM Version** to be active so that they are visible!

| Data field header | Data field description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALT               | Current altitude in meters or feet depending on your watch unit settings for distance. Please <a href="#">click here</a> and find further information in note 1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| A CAD             | Average cadence information of the whole session.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| A HR              | Average heart rate information in bpm for the whole session.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| A PACE            | Average pace information of the whole session for 1 km/mi depending on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| A PWR             | Average power in watt.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| A SPEED           | Average speed information of the whole session in km/h or mi/h based on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| CAD               | Current cadence information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| CL DIST           | Current LAP distance in km/mi depending on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CL PWR            | Current LAP power in watt.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| CL SPEED          | Current LAP speed (average) in km/h or mi/h depending on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CL TIME           | Current LAP time in the format hh:mm, h:mm:ss or mm:ss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| DIST              | Distance information in km or mi based on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| DOWN              | Negative altitude difference in meters or feet for the whole session depending on your watch unit settings for distance. Please <a href="#">click here</a> and find further information in note 1.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| ELAPS             | Elapsed total session time (including IDLE time) in the format hh:mm, h:mm:ss or mm:ss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| GRADE %           | Grade in percent. This information is derived from the distance and altitude information and averaged over the last 10 seconds. Please <a href="#">click here</a> and find further information in note 2.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| HR                | Current heart rate information in bpm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| HR ZONE           | <p>Current heart rate zone in the range of 0.0 to 6.0 with following meaning:</p> <ul style="list-style-type: none"> <li>* 0.0 ... current heart rate below Zone 1 (minimum heart rate)</li> <li>* 1.0 - 1.9 ... current heart rate in Zone 1</li> <li>* 2.0 - 2.9 ... current heart rate in Zone 2</li> <li>* 3.0 - 3.9 ... current heart rate in Zone 3</li> <li>* 4.0 - 4.9 ... current heart rate in Zone 4</li> <li>* 5.0 - 5.9 ... current heart rate in Zone 5</li> <li>* 6.0 ... current heart rate above Zone 5 (maximum heart rate).</li> </ul> <p>The value is derived from your cycling heart rate profile settings configured at Garmin.</p> |
| IDLE              | Idle session time where speed was below the following user-defined limit (default is 0.5 km/h or mi/h).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| KCAL              | Kilo-calories consumption for the whole session.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| LAP               | Current LAP number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| LL DIST           | Last LAP distance in km/mi depending on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| LL PWR            | Last LAP power in watt.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| LL SPEED          | Last LAP speed (average) in km/h or mi/h depending on your watch unit settings for distance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| LL TIME           | Last LAP time in the format hh:mm, h:mm:ss or mm:ss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| MOVE              | Moving session time (without IDLE time) in the format hh:mm, h:mm:ss or mm:ss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| M CAD             | Maximum cadence information of the whole session.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| M HR              | Maximum heart rate information in bpm for the whole session.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| M HR %            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|         |                                                                                                                                                                                                             |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|         | Current heart rate in percentage of maximum heart taken from the user settings depending on the application you are using. Please refer to HR ZONE for further details.                                     |
| M PACE  | Maximum pace information of the whole session for 1 km/mi depending on your watch unit settings for distance.                                                                                               |
| M PWR   | Maximum power in watt.                                                                                                                                                                                      |
| M SPEED | Maximum speed information of the whole session in km/h or mi/h based on your watch unit settings for distance.                                                                                              |
| PACE 5s | Current pace of the last 10 seconds (continuously calculated) for 1 km/mi depending on your watch unit settings for distance.                                                                               |
| PWR     | Current power in watt.                                                                                                                                                                                      |
| PWR 3s  | Power information in watt averaged over the last 3 seconds.                                                                                                                                                 |
| PWR 5s  | Power information in watt averaged over the last 5 seconds.                                                                                                                                                 |
| PWR 10s | Power information in watt averaged over the last 10 seconds.                                                                                                                                                |
| PWR 30s | Power information in watt averaged over the last 30 seconds.                                                                                                                                                |
| SPEED   | Current speed information in km/h or mi/h based on your watch unit settings for distance.                                                                                                                   |
| TEMP    | Current temperature in celsius or fahrenheit depending on your watch unit settings for temperature. Please <a href="#">click here</a> and find further information in note 3.                               |
| TIME    | Current time in 12/24h format based on your watch system settings.                                                                                                                                          |
| UP      | Positive altitude difference in meters or feet for the whole session depending on your watch unit settings for distance. Please <a href="#">click here</a> and find further information in note 1.          |
| VSPD 5s | Vertical speed in m/h or feet/h of the last 5 seconds when session is running depending on your watch unit settings for distance. Please <a href="#">click here</a> and find further information in note 2. |

Following table shows additional data fields available on Edge® devices only:

| Data field header              | Data field description                                                     |
|--------------------------------|----------------------------------------------------------------------------|
| Group cadence (avg/cur/max)    | Combined group data field showing average, current and maximum cadence.    |
| Group heart rate (avg/cur/max) | Combined group data field showing average, current and maximum heart rate. |
| Group power (avg/cur/max)      | Combined group data field showing average, current and maximum power.      |
| Group speed (avg/cur/max)      | Combined group data field showing average, current and maximum speed.      |

## 2.5.2 Notes

### Note 1

This information is only precise enough on watches with barometric altimeter as altitude information cannot be derived precisely from GPS. For further details, please [click here](#).

### Note 2

Information is only precise if you have an ANT+ speed sensor and a barometric altimeter on your watch. Especially if relative altitude information is derived from GPS, then it will not be very precise due to the physical limitations of GPS as described here. For further details, please [click here](#).

### Note 3

Temperature sensor support is only possible if your Garmin device has an internal temperature sensor. Please note that the update frequency depends on the device and can take 30 seconds up to 5 minutes.

## 2.6 Features

This section describes the most important features of the **CyclingDF4 2** in more detail. Here a short summary:

- [Session features](#)
- [Heart rate zone information](#)
- [ANT+ power profile support](#)

### 2.6.1 Session features

This section describes the workout session features which are very similar among all of our Garmin Connect IQ™ data fields. The current workout session status is indicated by a specific sign. Following table provides an overview about all possible states of a workout session.

| Session status | Visualization               | Description                                                                                                                                                                                                                                                         |
|----------------|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOT STARTED    | Blinking red border         | Workout session (recording) was not started so far. This is the state after starting the app. Press the "START" button to start workout.                                                                                                                            |
| RUNNING        | Constant grey header/footer | Workout session (recording) is running. This is the case after you manually pressed the "START" button. If the Auto-Stop feature is enabled, the speed must be above the specified limit, otherwise the app automatically enters AUTO-STOP mode.                    |
| AUTO-STOP      | Blinking yellow pause sign  | Workout session is in Auto-Stop mode which means that the speed is below the user-defined limit. Please be aware that no session recording takes place in this state.                                                                                               |
| PAUSED         | Blinking red stop sign      | Workout session (recording) was manually paused in the menu by selection of "Pause Session". It can be resumed at any point in time by entering the menu again and selecting "Resume Session". Please be aware that no session recording takes place in this state. |

#### Start a workout session (NOT STARTED)

After starting the app the workout session status is "NOT STARTED" as the session has to be manually started by the user. This can be done by pressing the "START" button. This state is visualized by showing a blinking red boarder every two seconds as illustrates in following picture:

#### Workout session running (RUNNING)

After pressing the "START" button the first time after app start, the session status changes from "NOT STARTED" to "RUNNING". This is illustrated by a constant grey header/footer as shown in the following picture:

**Auto-stop mode (AUTO-STOP)**

Whenever the speed goes below the user-specific limit the app automatically enters the "AUTO-STOP" mode. When the speed goes above this limit, the app enters "RUNNING" mode again. This state is visualized by showing a blinking yellow boarder with a pause sign in the middle every two seconds as shown in following picture:

**Manually paused session (PAUSED)**

The user can manually pause the workout session at any time if the session status is in "RUNNING" or "AUTO-STOP" mode. This can be done by pressing the "START" button. A menu is shown where the user can select among following choices by either pressing the touch screen or by up/down or left/right buttons:

| User selection   | Description                                                                                                                                                                                                     |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Resume           | Start or resume workout session                                                                                                                                                                                 |
| Pause            | Pause workout session. This allows the user to navigate through the data pages. The workout session can be resumed again at any time by pressing "START" button and select "Resume".                            |
| Save and Exit    | Save workout data and close the application. After synchronization with your watch or via Garmin Express Software the workout data will be uploaded to the Garmin cloud and will be visible via Garmin Connect. |
| Discard and Exit | Discard session data and close the application. Please note that all the collected workout data is lost!                                                                                                        |

A stopped session is indicated by a blinking red boarder and pause sign in the middle of the screen as shown in following figure:

2.6.2 Heart rate gauge

Depending on the app settings, the number in the heart rate gauge is either the current heart rate value or the percentage of the maximum heart rate. Additionally the background is shown in the color of the current heart rate zone for better visibility.

Following table describes the heart rate color coding:

| HR zone | Color    | Percentage of maximum heart rate |
|---------|----------|----------------------------------|
| Zone 0  | NONE     | M HR % < 50                      |
| Zone 1  | GREY     | 50 <= M HR % < 59                |
| Zone 2  | BLUE     | 60 <= M HR % < 69                |
| Zone 3  | GREEN    | 70 <= M HR % < 79                |
| Zone 4  | ORANGE   | 80 <= M HR % < 89                |
| Zone 5  | RED      | 90 <= M HR % < 99                |
| Zone 6  | DARK RED | M HR % >= 100                    |

Following figure illustrates how it looks on a D2™ Delta:

### 2.6.3 ANT+ power sensor support

This data field supports the ANT+ power sensor profile even on Garmin devices where this is not offered by Garmin itself.

This includes following watches:

- Approach® S50
- Approach® S60 and S62
- Approach® S70 42mm and 47mm
- Captain Marvel
- D2™ Air X10
- Darth Vader™
- First Avenger
- Forerunner® 55, 165, 165 Music, 245, 245 Music, 645 and 645 Music
- Rey™
- Venu™
- Venu™ SQ, Venu™ SQ Music
- Venu™ SQ 2, Venu™ SQ 2 Music
- Venu™ 2, Venu™ 2 Plus and Venu™ 2s
- Vivoactive® HR
- Vivoactive® 3, Vivoactive® 3 Music, Vivoactive® 3 Music LTE, Vivoactive® 3 Mercedes-Benz® Collection
- Vivoactive® 4s/4
- Vivoactive® 5

and following Edge devices:

- Edge® Explore

The pairing with the ANT+ power sensor is done automatically by the data field, based on the [user settings](#). During the workout following information can be shown on the data pages:

- PWR (current power value in watt)
- A PWR (average power value in watt)
- M PWR (maximum power value in watt)

In case the ANT+ power sensor supports cadence this information is derived from there as well. Following information is available during the workout:

- CAD (current cadence value in revolutions per minute)
- A CAD (average cadence value revolutions per minute)
- M CAD (maximum cadence value revolutions per minute)

If a workout is executed with a present ANT+ power sensor then following information is captured and later stored on Garmin Connect:

- Chart about current power values for the whole workout.
- Average power value for whole workout.
- Average cadence value for whole workout.

## 2.7 Frequently asked questions

---

### 2.7.1 What is the difference between data field 1 and 2

---

For cycling, hiking and running we offer two data fields which are currently either the same or very similar. E.g. for cycling these are:

- CyclingDF4 1 and 2
- CyclingDF7 1 and 2

There are following main reasons for that:

- The resources for data fields on some devices (with 32kB) are very limited. Therefore features will be balanced upon the two data fields.
- The user can already now add both data fields and select different metrics for each of them.

For further details, please click [here](#).

### 2.7.2 What is the difference between CyclingDF4 1 and 2?

---

Even though both data fields are currently more or less identical, it still makes sense to have two, because Garmin allows to add two different Connect IQ data fields where you can choose different metrics in the data field settings for each of them.

The actual differences between CyclingDF4 1 and 2 are:

- For watches with 32 kB or less memory, following differences are present:
  - Only CyclingDF4 1 has temperature as metric available.
- For Edge® devices with 32 kB or less memory, following differences are present:
  - Only CyclingDF4 1 has the option to configure to which ANT+ device the power sensor is paired.

**Note:**

An overview about the memory consumption of the different devices can be [found here](#).

### 2.7.3 What to do if the app or data field does not work?

---

We do our best to test the applications and data fields as good as possible. As we do not have all physical available Garmin devices and all ANT+ sensors with all combinations of Garmin firmware versions, we have to do most of the tests on the simulator provided by Garmin. If you detect problems with our application or data field on your Garmin device, please provide us detailed feedback via the official bug report form in order we are able to understand and reproduce your problem. This gives us a fair chance to provide a fix as soon as possible.

[Please press here to get the bug report dialog](#)

THANK YOU VERY MUCH for YOUR SUPPORT!!!!

### 2.7.4 Why is an update of the firmware required?

---

Some users reported that an update of the firmware is requested even though the latest firmware is already installed. In such a case, please try out following options:

- Update your Garmin Express or Garmin Mobile software (if you don't have the latest versions installed).
- Reboot your device once.

## 2.7.5 What is the purpose of the FREE version?

The **FREE Version** is fully functional and offers you a basic feature set which allows you to test the application or data field intensively without any risk on your Garmin device.

**Note:**

In our standalone applications some more advanced features (e.g. alerts) cannot be activated in the FREE version and a periodic **FREE Version** notification is shown.

**Note:**

In our data fields all features are available even in the FREE version but still a periodic **FREE Version** notification is shown.

If you like our application or data field we would be very happy if you donate to upgrade to the **PREMIUM Version**.

## 2.7.6 How to upgrade to the PREMIUM version?

If you like our application or data field and would you like to benefit of following further advantages:

- support our further development or
- unlock all (more advanced) features or
- get ride of the periodic **FREE Version** notification

we would be very happy if you donate to upgrade to the **PREMIUM Version**.

**Note:**

The PREMIUM version is a **lifetime license** which is valid for ALL future updates and can be used on as many devices you personally own, even at the same time!

Here two links for further details how to donate for the **PREMIUM Version**:

- [RH-SPORTS website](#)
- [Online shop](#) with additional payment options like:
  - stripe credit card
  - PayPal (including credit card, debit card and bank transfer)
  - Payment in advance (useful for countries where stripe or PayPal do not work)

## 2.7.7 I did not received the unlock keys for the PREMIUM Version after donation?

After successful donation you immediately will get a mail to the mail address used in PAYPAL. It contains the unlock keys and the activation information for the selected **PREMIUM version(s)**. The information is provided as attached PDF. If this is not the case, please do following:

- Check whether you used the right mail address. It is the one you are using in PAYPAL.
- Check whether the mail went to your JUNK or SPAM folder.
- Write a mail to [rh-sports@gmx.at](mailto:rh-sports@gmx.at) to request the keys.

## 2.7.8 What to do if after entering the key, still the FREE version is active?

You can detect whether the **FREE version** is still active or not in following way:

- In standalone applications (e.g. Running App Professional) the **FREE version** is active, if you see a "Please donate as EARLY BIRD" message upon application start.
- In data fields (e.g. RunningDF4 1), which have to be integrated into one of the Garmin native apps, the **FREE version** is active if you get a "FREE Version" notification upon session start and regularly after some minutes.

Some users reported that the **FREE version** is still active after entering the registration key and after synchronization. In all known cases, the wrong key has been entered. Please make sure that you enter the proper key and following the instructions below:

Here some important registration hints:

**Hint 1:** Please copy the registration key with 9 characters length exactly in the given format (XXXX XXXX) into this text field. The registration key is a hexadecimal number (numbers from 0 to 9 and big letters from A to F) and the evaluation is case sensitive. No spaces are allowed at the beginning or end. One space is mandatory after the fourth character.

**Hint 2:** Users reported that on some devices (e.g. Android-based mobile phones) more than one space is added when copying the key to the app settings field. Please make sure that there is exactly one space after the fourth character.

**Hint 3:** Please synchronize the settings with your watch afterwards. If you use Garmin Express software on PC or MAC, please disable the bluetooth connection between your mobile phone and watch during configuration as otherwise the settings might be overwritten again.

**Hint 4:** Sometimes it is necessary to reboot the watch once (for whatever reason).

**Hint 5:** Please use the right key for the selected application or data field.

**Hint 6:** Please make sure that there are no floating point values in the app settings anymore (except for Swimming App where they are allowed).

## 2.7.9 What to do if GPS is not found upon start?

Sometimes it happens that GPS is not found during app startup and the app polls infinitely for a proper GPS signal. According to customer feedback this happens when the Garmin (sensor) firmware was updated. This is out of our control. Following workaround seems to do the trick:

- Once start a Garmin native app like running, cycling, etc.
- Wait until GPS is found.
- Stop the Garmin native app and start one of our apps.
- GPS should be found soon.

### Note:

Indoor it is sometimes very difficult for a device to find a proper GPS signal. So please make sure you do it outdoor.

## 2.7.10 How to enable GPS, GLONASS or GALILEO?

On Garmin devices with CIQ below 3.3.6, Garmin does not allow Connect IQ applications to controll which satellites are used. Following steps seem to help here as workaround:

- Once start a Garmin native app like running, cycling, etc.
- Select the required positioning sources in the settings of the native app.
- Stop the Garmin native app and start one of our apps.
- According to our information the selected sources of the native app are then used for our apps as well.

## 2.7.11 What to do in case of a app or data field crash upon start?

If you see following icon on your Garmin device upon application start or when you add a data field into a Garmin native app:

please completely uninstall and reinstall the application or data field. The setting file changed and the automated Garmin install is not replacing the setting file.

## 2.7.12 What to do if settings cannot be changed?

---

Setting changes always work in the Garmin eco-system and a valid connection to Garmin servers are necessary. Sometimes these servers are down and settings cannot be changed.

**Note:**

Unfortunately this is out of our control and we have to wait until Garmin fixed that problem.

In case the settings are corrupted, then following sequence may help:

- Delete app
- Synchronize
- Once reboot your device (e.g. watch)
- Install the app again
- Change settings

## 2.7.13 User settings lost after update?

---

Unfortunately Garmin may reset the user settings when updating the Garmin firmware version of the application or data field. This leads to the problem that all configurations are lost and the **FREE Version** is active again. I'm testing some work-arounds but so far I was not successful. As soon as I have updates, I will publish them here.

## 2.7.14 Activity not visible on Garmin Connect?

---

There could be several reasons why an activity is not visible on Garmin Connect:

- Activity recording was never started.
- Activity recording was not saved upon leaving the Garmin native app.
- No synchronization between device and Garmin Connect happened.
- Especially in indoor sessions it can happen that the device stays in Auto-Stop Mode. Please deactivate this feature in the user settings.
- Especially in indoor sessions no movements might be detected by the device. Thus distance stays 0. In such a case no activity results are stored on Garmin Connect.

## 2.7.15 Activity tracking and fitness metric accuracy

---

The app uses the Garmin API's to retrieve most of the information and cannot be more precise than the data delivered from there. Garmin states following about activity tracking and accuracy:

- "Garmin devices are intended to be tools to provide you with information to encourage an active and healthy lifestyle. Garmin wearables rely on sensors that track your movement and other metrics. The data and information provided by these devices is intended to be a close estimation of your activity and metrics tracked, but may not be precisely accurate. Garmin wearables are not medical devices, and the data provided by them is not intended to be utilized for medical purposes and is not intended to diagnose, treat, cure, or prevent any disease. Garmin recommends you consult your doctor before engaging in any exercise routine."

## 2.7.16 Accuracy of wrist-based heart rate (Elevate)

The app uses the Garmin API to retrieve heart rate related data cannot be more precise than the data delivered from there. Regarding wrist-based accuracy, Garmin states following:

- "The optical wrist heart rate (HR) monitor for Garmin wearables is a valuable tool that can provide an accurate estimation of the user's heart rate at any given point in time. The optical HR monitor is designed to attempt to monitor a user's heart rate 24 hours a day, 7 days a week. The frequency at which heart rate is measured varies, and may depend on the level of activity of the user. When you start an activity with your Garmin optical HR device, the optical HR monitor measures more frequently. The intent is to provide the user with a more frequent and accurate heart rate reading during a given activity."
- "While our wrist HR monitor technology is state of the art, there are inherent limitations with the technology that may cause some of the heart rate readings to be inaccurate under certain circumstances. These circumstances include the user's physical characteristics, the fit of the device and the type and intensity of the activity as outlined above. The HR monitor data is not intended to be used for medical purposes, nor is it intended to diagnose, treat, cure or prevent any disease or condition."
- "Wrist heart rate accuracy during swimming is very limited. Garmin does not recommend using wrist heart rate during swimming activities and on some products, wrist heart rate monitoring is disabled while swimming. Garmin recommends using HRM-Swim™ or HRM-Tri™ heart rate monitors with compatible devices to track heart rate while swimming."

## 2.7.17 Is there a way to enable/disable GLONASS?

The GPS/GLONASS setting is based on what was last used in the Garmin native apps (like cycling, running). Garmin does not allow Connect-IQ apps or data fields to change this setting.

## 2.7.18 Why is info derived from altitude (e.g, UP, DOWN, PWR, GRADE in %) not accurate?

People with Garmin devices (e.g. watches) are frequently concerned about the accuracy (or lack of it) of the altitude data (or from altitude derive data) if the info is derived from GPS and not from a barometric altimeter. Many suspect their equipment or the app may even be defective or buggy when they see the altitude data. Unfortunately this is NORMAL as GPS is not accurate enough regarding altitude information. Following Garmin devices have no barometric altimeter and are thus affected (list might not be complete):

- ForeAthlete® 230J, ForeAthlete® 235J, ForeAthlete® 630J.
- Forerunner® 735XTJ, ForeAthlete® 920XTJ, Forerunner® 230, Forerunner® 235, Forerunner® 630, Forerunner® 735XT.
- Vivoactive™ series.
- Others: [Please take a look to the Garmin feature set description for your device.](#)

With the integrated GPS receivers, the horizontal error is specified to be within about +/- 15 meters (50 feet) 95% of the time. Most users find this is a conservative specification and that their modern GPS receivers routinely perform better than this worst case specification. But users should expect that SOMETIMES they may see the error approach the specification limits. AND 5% of the time, the error may be "any value" from zero to whatever. Note: Unless you have a CLEAR AND UNOBSTRUCTED view of the sky you can count on your error excursions to be much greater than the above numbers. Your GPS depends on this clear and unobstructed view or it cannot make accurate range measurements to the satellites. Generally, altitude error is specified to be 1.5 times horizontal error specification. This means that the user of standard consumer GPS receivers should consider +/-23meters (75ft) with a DOP of 1 for 95% confidence. Altitude error is always considerably worse than the horizontal (position error). Much of this is a matter of geometry. If we (simplistically) consider just four satellites, the "optimum" configuration for best overall accuracy is having the four SVs at 40 to 55 degrees above the horizon and one (for instance) in each general direction N, E, W, and S.

### Note:

You will get a very BAD DOP if the SVs are at the exact same elevation. Luckily, this is a rare occurrence. The similar "best" arrangement for vertical position is with one SV overhead and the others at the horizon and 120 degrees in azimuth apart. Obviously, this arrangement is very poor from a signal standpoint. As a result, of this geometry the calculated solution for altitude is not as accurate as it is for horizontal position. Almost any calibrated altimeter will be more stable at reading altitude than a GPS. GPS altitude measures the user's distance from the center of the SVs orbits. These measurements are referenced to geodetic altitude or ellipsoidal altitude in some GPS equipment. Garmin and most equipment manufacturers utilize a mathematical model in the GPS software which roughly approximates the geodetic model of the earth and reference altitude to this model. As with any model, there will be errors as the earth is not a simple mathematical shape to represent. What this means is that if you are walking on the seashore, and see your altitude as -15 meters, you should not be concerned. First, the geodetic model of the earth can have much more than this amount of error at any specific point and Second, you have the GPS error itself to add in. As a result of this combined error, I am not surprised to be at the seashore and see -40 meter errors in some spots.

Following data fields are affected if you have no watch with barometric altimeter:

- UP
- DOWN
- GRADE in %
- PWR, A PWR, M PWR (if not derived from a compatible ANT+ power sensor)
- VSPD xs, A VSPD, M VSPD

## 2.8 Backlog

---

This section shows the backlog with potential features planned for upcoming releases:

- Cadence zone coloring
- Power zone coloring
- Pairing for power sensor

**Note:**

Please note that there is no guarantee if and when the feature will be implemented!

## 2.9 Version history

---

The following table lists the version history of the latest released **CyclingDF4 2** versions:

| Version | Date       | Change description                                                                                                                                                                                                                                 |
|---------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.6.0   | 29.09.2025 | Support for Instinct® Crossover AMOLED added<br>Support for Venu® 4 41mm and 45mm added                                                                                                                                                            |

## 3. Deutsch

---

### 3.1 Deutsche Dokumentation

---

Diese Seite beinhaltet die deutschen Dokumente für alle Garmin Connect-IQ-kompatiblen Applikationen und Datenfelder von RH-SPORTS.

Aktuell ist nur eine Liste aller Datenfelder in deutscher Beschreibung verfügbar.

**Note:**

Die Dokumentation in deutscher Sprache ist in Arbeit und kommt in den nächsten Monaten sukzessive für alle verfügbaren Applikationen.

### 3.1.1 Datenfelder

---

Folgende Tabelle beschreibt alle Datenfelder unserer Garmin Connect-IQ kompatiblen Apps (mit Ausnahme der Skiing App). Bitte berücksichtigen Sie folgende zwei Punkte:

- Einige Datenfelder sind nur in der **PREMIUM Version** verfügbar.
- Nicht jedes Datenfeld ist in jeder angebotenen Applikation oder Datenfeld verfügbar.

| Datenfeld | Beschreibung                                                                                                                                                                                                                                                                                                                           |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AHEAD     | Aktuelle Zeit die Sie vor (bei positivem Wert) oder hinter (bei negativem Wert) dem konfiguriertem Rennziel liegen. Die Angabe ist im Format hh:mm, h:mm:ss, mm:ss oder m:ss.                                                                                                                                                          |
| ALT       | Aktuelle Höhe in Meter oder Fuß, abhängig von den Einstellungen auf der Uhr für Höhe.                                                                                                                                                                                                                                                  |
| A CAD     | Durchschnittliche Trittfrequenz in Umdrehungen pro Minute, gemittelt über die gesamte Trainingseinheit.<br><br>Anmerkung:<br>In der Cycling App Professional werden nur jene Zeiten berücksichtigt, wo auch wirklich getreten wird. In Garmin Connect ist allerdings der Wert gespeichert, der auch die Zeiten ohne Treten beinhaltet. |
| A HR      | Durchschnittliche Herzfrequenz in Schläge pro Minute gemittelt über die gesamte Trainingseinheit.                                                                                                                                                                                                                                      |
| A PACE    | Durchschnittliche Pace der aktuellen Trainingseinheit für einen Kilometer oder eine Meile, abhängig von den Einstellungen auf der Uhr für Pace/Geschwindigkeit.                                                                                                                                                                        |
| A PWR     | Durchschnittliche Power in der aktuellen Trainingseinheit in Watt. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 4</a>                                                                                                                                                                                                          |
| A SPEED   | Durchschnittliche Geschwindigkeit der aktuellen Trainingseinheit in Kilometer/Stunde oder Meilen/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                       |
| A VSPD    | Durchschnittliche vertikale Geschwindigkeit in der aktuellen Trainingseinheit in Meter/Stunde oder Fuß/Stunde, abhängig von den Einstellungen auf der Uhr. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 1</a>                                                                                                                  |
| CAD       | Aktuelle Trittfrequenz in Umdrehungen pro Minute.                                                                                                                                                                                                                                                                                      |
| CL DIST   | Distanz der aktuellen Runde in Kilometer oder Meilen, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                                          |
| CL PACE   | PACE der aktuellen Runde für einen Kilometer oder eine Meile, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                                  |
| CL SPEED  | Durchschnittsgeschwindigkeit der aktuellen Runde in Kilometer/Stunde oder Meilen/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                       |
| CL TIME   | Aktuelle Rundenzeit im Format hh:mm, h:mm:ss, mm:ss oder m:ss.                                                                                                                                                                                                                                                                         |
| CR AHR    | Durchschnittliche Herzfrequenz während der aktuellen Abfahrt in Schläge pro Minute.                                                                                                                                                                                                                                                    |
| CR DOWN   | Aktuelle negative Höhenmeter während der aktuellen Abfahrt in Meter oder Fuß, abhängig von den Einstellungen auf der Uhr für Höhe.                                                                                                                                                                                                     |
| CR DIST   | Zurückgelegte Strecke der aktuellen Abfahrt in Kilometer oder Meilen, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                          |
| CR MHR    | Maximale Herzfrequenz während der aktuellen Abfahrt in Schläge pro Minute.                                                                                                                                                                                                                                                             |
| CR MSPD   | Maximale Geschwindigkeit der aktuellen Abfahrt in Kilometer/Stunde oder Meilen/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                         |
| DBG1      | Debug Datenfeld das aktuell den minimalen freien Speicher anzeigt.                                                                                                                                                                                                                                                                     |
| DIST      | Aktuell zurückgelegte Strecke in Kilometer oder Meilen, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                                        |
| DIST REM  | Noch zu laufende Strecke in Kilometer oder Meilen, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                                             |
| DOWN      | Absteigende Höhenmeter in der aktuellen Trainingseinheit in Meter oder Fuß, abhängig von den Einstellungen auf der Uhr für Höhe. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 1</a>                                                                                                                                            |
| ELAPS     | Vergangene Zeit in der aktuellen Trainingseinheit (inkl. Standzeiten bei eingeschaltetem Auto Start/Stop Feature) im Format hh:mm, h:mm:ss, mm:ss oder m:ss.                                                                                                                                                                           |
| ETA       | Geschätzte Ankunftszeit auf Basis Ihrer Konfigurationen im Format hh:mm, h:mm:ss, mm:ss oder m:ss.                                                                                                                                                                                                                                     |
| GRADE %   | Aktuelle Steigung in Prozent. Diese Information wird abgeleitet von der zurückgelegten Strecke und Höhe gemittelt über die letzten 10 Sekunden. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 2</a>                                                                                                                             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| PACE     | Aktuelle PACE gemittelt über die letzten x Sekunden für einen Kilometer oder eine Meile, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| PACE xs  | Aktuelle PACE gemittelt über die letzten x Sekunden für einen Kilometer oder eine Meile, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| PACE REQ | Benötigte PACE um das konfigurierte Rennziel zu erreichen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PHASE    | Aktuelle Phase, entweder Run (=Abfahrt) oder Up (Liftfahrt).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|          |                                                                                                                                                                                                                                                    |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PRESSURE | Barometrischer Druck in Pascal.                                                                                                                                                                                                                    |
| PWR      | Aktuelle Leistung in Watt. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 4</a>                                                                                                                                                              |
| PWR xs   | Leistung in Watt gemittelt über die letzten x Sekunden. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 4</a>                                                                                                                                 |
| RUNS     | Gesamtanzahl der bereits getätigten Abfahrten.                                                                                                                                                                                                     |
| R AHR    | Durchschnittliche Herzfrequenz in Schläge pro Minute gemittelt über alle Runs (=Abfahrten).                                                                                                                                                        |
| R ASPD   | Durchschnittlich Geschwindigkeit aller Abfahrten in Kilometer/Stunde oder Meilen/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                   |
| R AVSPD  | Durchschnittlich vertikale Geschwindigkeit aller Abfahrten in Meter/Stunde oder Fuß/Stunde, abhängig von den Einstellungen auf der Uhr. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 1</a>                                                 |
| R DIST   | Aktuell zurückgelegte Abfahrtsstrecke in Kilometer oder Meilen, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                                            |
| R TIME   | Vergangene Zeit aller Abfahrten im Format hh:mm, h:mm:ss, mm:ss oder m:ss.                                                                                                                                                                         |
| R MHR    | Maximale Herzfrequenz aus allen Abfahrten in Schläge pro Minute.                                                                                                                                                                                   |
| R MSPD   | Maximale Geschwindigkeit aller Abfahrten in Kilometer/Stunde oder Meilen/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                           |
| R MVSPD  | Maximale vertikale Geschwindigkeit aller Abfahrten in Meter/Stunde oder Fuß/Stunde, abhängig von den Einstellungen auf der Uhr für Distanz.                                                                                                        |
| SPEED    | Aktuelle Geschwindigkeit in Kilometer/Stunde or Meilen/Stunde, abhängig von den Einstellungen auf der Uhr.                                                                                                                                         |
| STEPS    | Anzahl der zurückgelegten Schritte in der aktuellen Trainingseinheit.                                                                                                                                                                              |
| STEPS T  | Anzahl der zurückgelegten Schritte am heutigen Tag.                                                                                                                                                                                                |
| STEP G   | Schrittziel für den heutigen Tag.                                                                                                                                                                                                                  |
| STEP G%  | Aktueller Prozentsatz für die Zielerreichung der Schritte für den heutigen Tag.                                                                                                                                                                    |
| TEMP     | Aktuelle Temperatur in Celsius oder Fahrenheit, abhängig von den Einstellungen auf der Uhr für Temperatur. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 3</a>                                                                              |
| TIME     | Aktuelle Tageszeit 12- oder 24-Stundenformat, abhängig von den Einstellungen auf der Uhr.                                                                                                                                                          |
| UP       | Aufsteigende Höhenmeter in der aktuellen Trainingseinheit in Meter oder Fuß, abhängig von den Einstellungen auf der Uhr für Höhe. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 1</a>                                                       |
| VSPD xs  | Aktuelle vertikale Geschwindigkeit in der aktuellen Trainingseinheit in Meter/Stunde oder Fuß/Stunde gemittelt über die letzten x Sekunden, abhängig von den Einstellungen auf der Uhr. Bitte berücksichtigen Sie auch <a href="#">Anmerkung 2</a> |

### 3.1.2 Anmerkungen

#### Anmerkung 1

Diese Information ist nur dann genau genug wenn die Uhr über einen barometrischen Höhenmesser verfügt. Eine Ableitung der Höheninformation über GPS ist zwar möglich aber ungenau.

#### Anmerkung 2

Diese Information ist nur dann genau genug wenn Sie über einen ANT+ Geschwindigkeitssensor und eine Uhr mit barometrischem Höhenmesser verfügen. Speziell die Höheninformation ist aufgrund physikalischer Grundsätze sehr ungenau, wenn sie von GPS abgeleitet wird und für Differenzmessungen verwendet wird.

**Anmerkung 3**

Eine Temperatur-Messung in Garmin Apps funktioniert nur dann wenn Sie über einen ANT+ TEMPE Sensor verfügen.

**Anmerkung 4**

Diese Information ist nur dann genau genug wenn Sie über einen ANT+ Power Sensor verfügen. Alternative ist auch eine Schätzung der Leistung implementiert, die aber für brauchbare Genauigkeit einen barometrischem Höhenmesser benötigt.
